

The background of the slide is a dark, deep blue color. It is filled with numerous out-of-focus light spots, known as bokeh. These spots vary in size and color, with a primary palette of light blue and cyan, interspersed with some warm yellow and orange tones. The overall effect is a soft, ethereal, and modern aesthetic.

[Overall](#) [New Capability](#) [Integration Factory](#)

- 1 Accenture has successfully designed, implemented and operated Federated Next Generation Cyber Security Capabilities currently supporting the United States Air Force and Department of Energy. This experience provides security detection and response at the tactical edge while informing centralized C2/SA.
- 2 The solution is designed to support Denied, Disrupted, Intermittent, and Limited bandwidth environments identify and defeat adversarial actions.
- 3 The solution supports local data ingest, processing, storage and automation for detection and response activities. The solution also supports data aggregation to central sites as connectivity permits

- 4 The solution is capable of supporting both NIPR and SIPR environments and is supported by a cross domain solution to facilitate data access between classified and unclassified environments.
- 5 Accenture has successfully integrated this solution with the Air Force Big Data Platform known as ELICSAR to support Unified Platform and JCWA requirements.
- 6 The solution is designed to support all source data ingest leading to the ability to better support the diversity of networks across the Navy

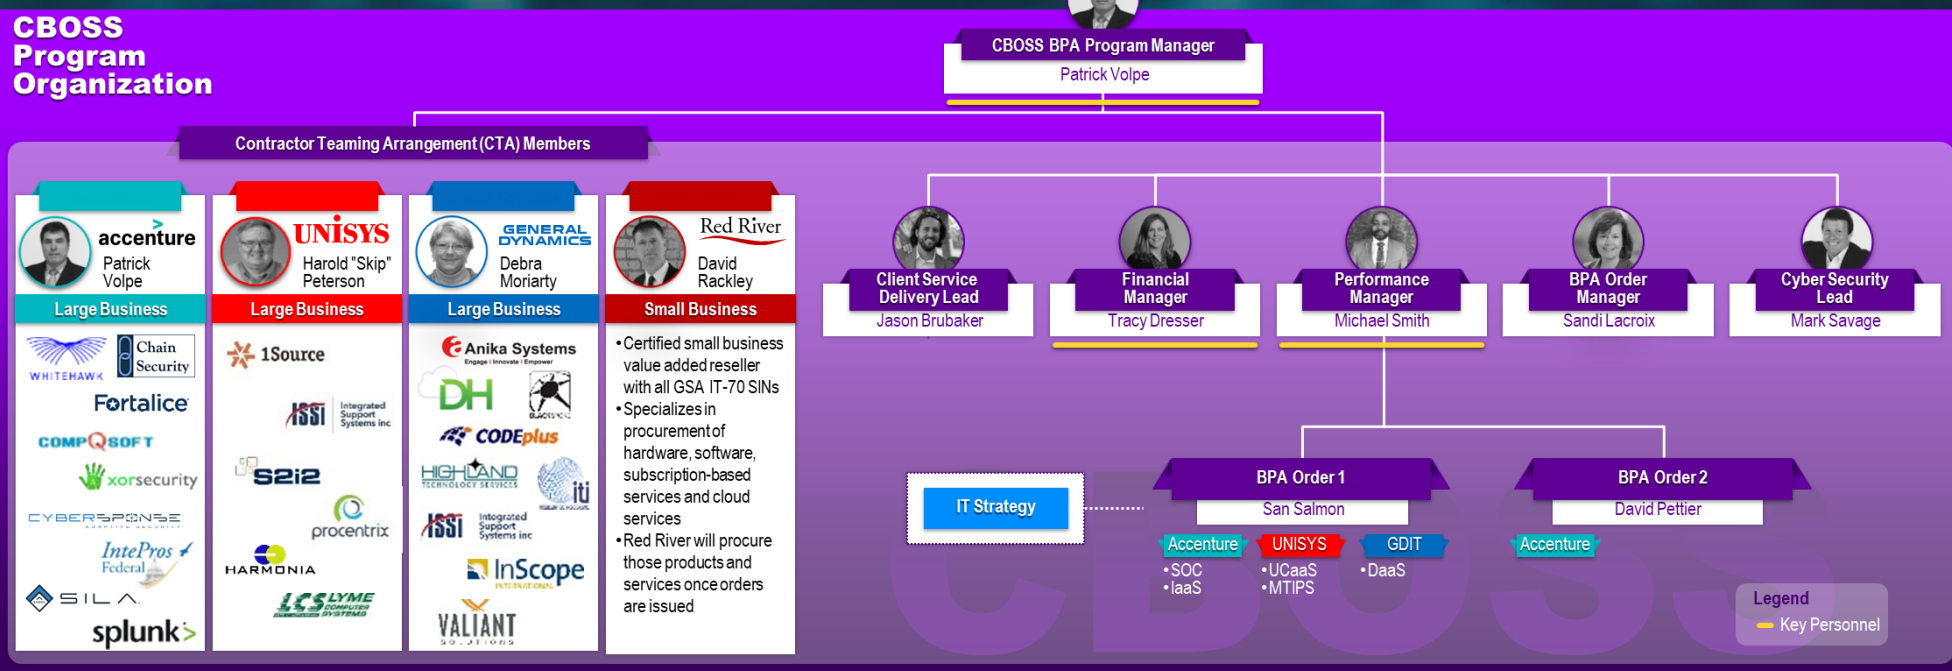

- 7 This data aggregation and dissemination capability leads to better visibility to FCC/C10F to exercise C2, SA, and support DCO and NetOps.
- 8 Solution supports data ingest for commercial threat intelligence sources
- 9 Solution supports data ingest classified threat intelligence sources

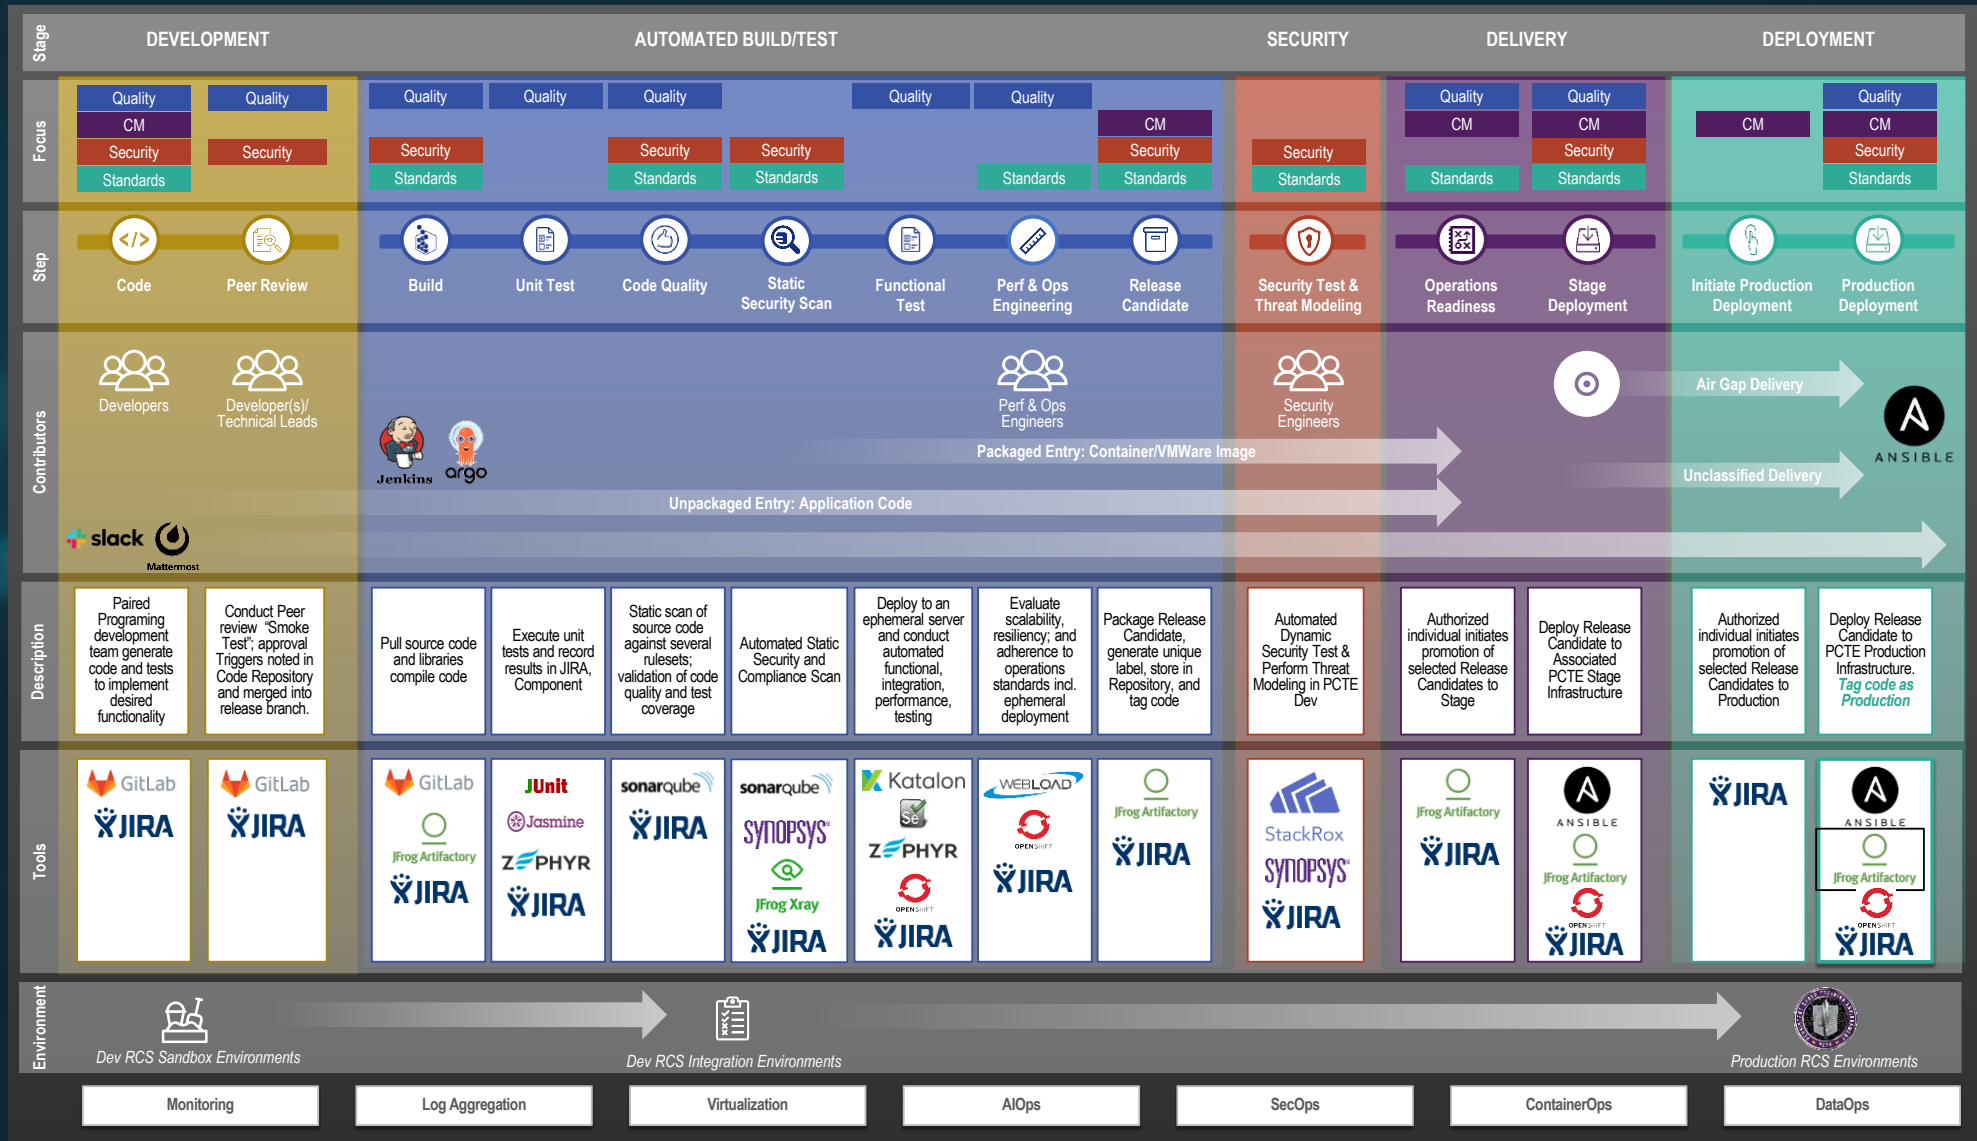

- 10 Our automated DevSecOps methods enable software code to be released on demand & moved to production. Our automated software build, scan, & test routines reduce the manual testing effort.
- 11 Our configuration management approach enables software development increasing speed. Our governance constructs maintain baseline control ensuring software is being configured & tested consistently with production environment standards.
- 12 Our DevSecOps processes embed security scans into our automated processes reducing security risk. We scan code using the approved scanning tools approved for use according to the security classification.

- 12 Our DevSecOps processes embed security scans into our automated processes reducing security risk. We scan code using the approved scanning tools approved for use according to the security classification.

Accenture Guiding Principles

- A** Human Centered Design
- B** Agile by Default
- C** PDK+ - Evolve the Core
- D** Automation Everywhere
- E** Unlock Data
- F** Security First
- G** Exponential Capability Delivery
- H** Pervasive Intelligence
- I** Scalable & Resilient Platform

Key Activities

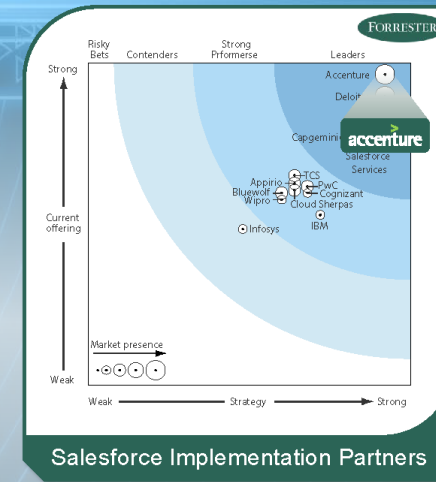

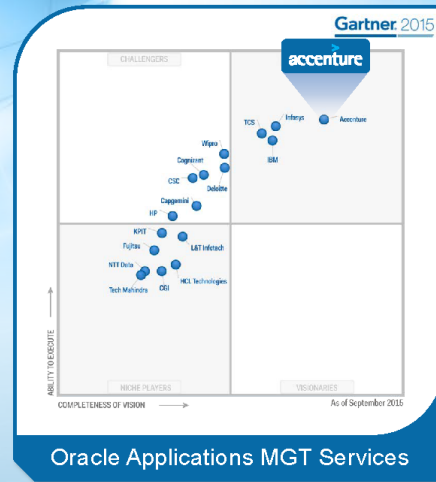

- A** Help TRIDENT identify & prioritize CIC products & other innovation that conform to PDK standards & are based on strategic priorities.
- B** TRIDENT DevSecOps team provides CIC and other vendors a consistent, integrated & secured development sandboxes.
- C** TRIDENT DevSecOps team applies automated PDK based acceptance criteria to ensure quality & rapid capability delivery.
- D** TRIDENT DevSecOps is agile by default, leverages reuse to increase speed of CICs and other vendor product delivery into PCTE Baseline.
- E** TRIDENT DevSecOps team generates & maintains PCTE baselines for multiple RCSs and security zones.
- F** TRIDENT DevSecOps team coordinates and deploys new PCTE Baseline to all Prod RCSs and in future to Clouds
- G** TRIDENT Operations team automates & operates highly available RCS capable of hosting multiple cyber training
- H** TRIDENT Operations team automates provisioning of multiple event planes and manages them through a single pane

Improvements & Innovations

- A** TRIDENT may leverage Accenture Innovation Architecture's Research & Ventures to identify CIC products and to inform TRIDENT on emerging technologies and Innovation.
- B** Facilitates high quality capability development and rapid CICs insertions by evolving & extending existing TRIDENT CI/CD pipeline to the left.
- C** Automatically review the validation results from sandboxes to validate CIC and other development quality and compliance before porting over the containers and VM Images provided by the vendor to the Integration Factory.
- D** Implement a consistent set of CI/CD tools in combination with automated testing, Infrastructure as code to unit test, integration and performance test. CICs products and other development and promote them across Dev, Test, UAT and Production environment.
- E** Baselines of PCTE versions are released into TS/SCI, Secret and UNCLASS RCSs and in future Cloud instances from a unified Ops pane.
- F** Consistent CI/CD pipeline leveraged to push or pull PCTE releases into the RCSs.
- G** TRIDENT Operations team standardizes RCSs around consistent DevSecOps tooling, JIRA Service Desk to efficiently manage the full PCTE product lifecycle.
- H** TRIDENT Ops team uses Ansible and Terraform to automatically provision resources to the event plane.

Sample of Accenture's Worldwide Industry Leadership

strategy • consulting • digital • technology • operations

Layers of Security

Risk Management

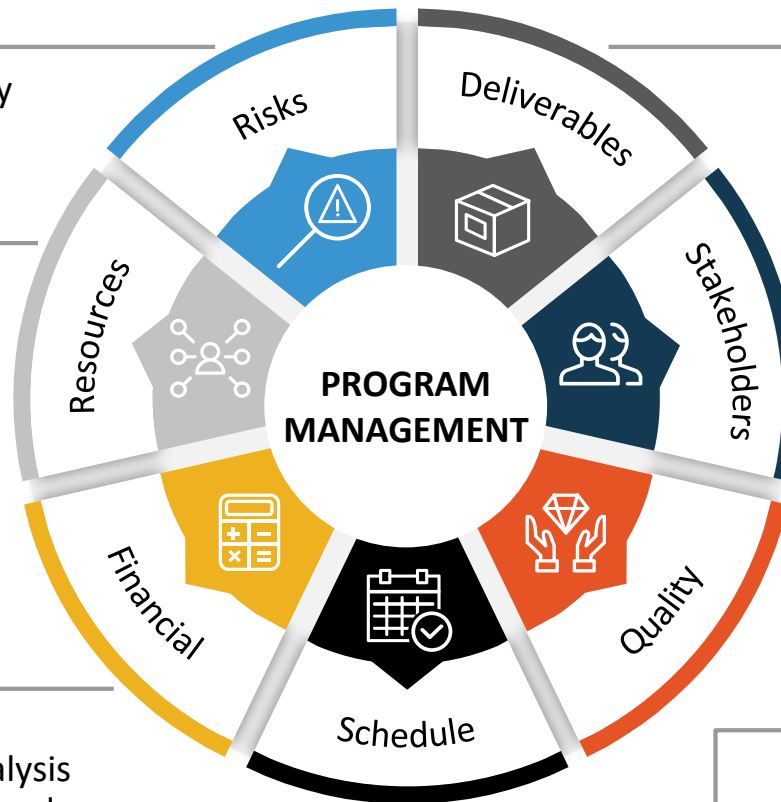

- Develop comprehensive risk registry
- Manage risks and issues
- Resolve or escalate risks

Resource Management

- Staff the right resources for each phase of engagement
- Facilitate staffing continuity and effective onboarding/offboarding
- Maintain current security clearances, education, and training
- Manage subcontractors

Financial Management

- Provide regular workplan updates
- Conduct work effort review and analysis
- Promptly complete billing, invoice, and payment activities

Deliverable Management

- Collaborate early
- Evaluate draft work products
- Follow submission protocol

Stakeholder Management

- Establish, update, and maintain project schedule
- Enable thorough stakeholder analysis and communication planning

Quality Management

- Follow quality assurance process for all work products
- Develop quality control plan

Schedule Management

- Establish, update, and manage project schedule
- Provide regular status updates

Our Industry-leading Agile and DevSecOps Methodologies Reduce Implementation Risks

Our experience applying Agile and DevSecOps practices across 87 TSA enterprise applications demonstrates our ability to support Trademark's diverse product line.

Our Field-tested, Human-Centered Approach Increases User Adoption

Our experience enabling FSA to broaden access to student aid using our web-based tools demonstrates our ability to meet the needs of Trademark's customers by putting the human first.

Our Capability Injection Model Enables Rapid Scalability of Innovations

Our experience implementing IT updates that enabled VA to support Veterans and their families through COVID-19 demonstrates our ability to quickly scale solutions to help Trademark meet fast-changing policies.

Supported by the Largest Pool of Certified Resources

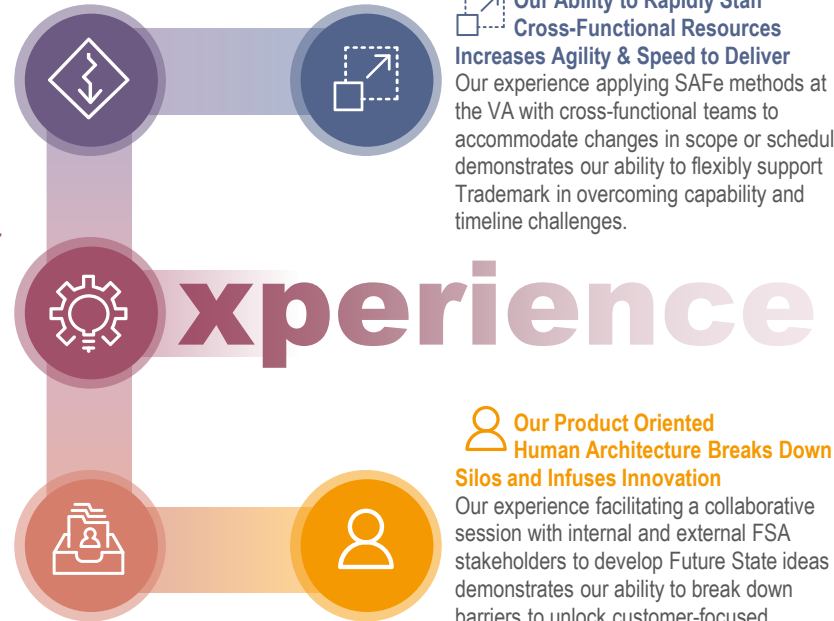

- 75,000+ Agile Practitioners
- 44,000+ trained and 350 certified DevSecOps specialists
- 3,800+ Emerging Technology Master Architects
- 20,000+ Big Data/Analytics specialists
- 5,000+ Security Specialists
- 3,000+ Microservices Specialists
- 2,050+ Docker Specialists
- 900+ OpenShift Specialists
- 4,000+ CI/CD Automation Specialists
- 159,000+ Java Developers
- 1,200 Human Centered Design specialists'

Backed by Extensive Federal and Commercial Experience

- 135 Federal Programs Transitioned to Agile
- 100% DevSecOps automation factory approach field-tested across 9,000 programs
- 14 of the Government's Most Mission Critical Programs Transitioned from Incumbent
- 100% Up Time across Programs in Transition
- 200+ Federal human-centered projects
- 500+ field-tested human-centered methods
- 13-year history partnering with AWS
- Migrated 60K+ applications to the AWS Cloud
- At USPTO, achieved an interim authority to operate in two months

Recognized & Certified by Industry as a Leader

- One of only two certified SAFe Agile Transformation partners in the world
- CMMI Level 4 Certified using Agile
- ITIL v4 Certified
- Amazon, Azure and Google's #1 integrator, with premier partnerships across all three
- Ranked a leader by 100% of leading industry analysts in Data, Analytics, AI, and Intelligent Automation services
- #1 Analytics as a Service provider according to Gartner with FedRamp High approved AIP-IQ platform
- #1 Digital Change Management Provider according to Everest Group and HFS Research

Our Ability to Rapidly Staff Cross-Functional Resources Increases Agility & Speed to Deliver

Our experience applying SAFe methods at the VA with cross-functional teams to accommodate changes in scope or schedule demonstrates our ability to flexibly support Trademark in overcoming capability and timeline challenges.

Our Product Oriented Human Architecture Breaks Down Silos and Infuses Innovation

Our experience facilitating a collaborative session with internal and external FSA stakeholders to develop Future State ideas demonstrates our ability to break down barriers to unlock customer-focused innovation at Trademark.

1

Obtain an EID or B-ID through **IQN** (Teaming Partners/Contractors) or **AFS Visitation** (LLP Personnel)

2

Review **PRC ExpressRoute** Guidelines

3

Verify **compliance training** is completed on time

4

After proposal support is complete, close out **ExpressRoute** enablement per email instructions.

5

Submit **deactivation request** from IQN or visitation tool

	Best for	Laptop	Timeline	Access	Tenants
PRC ExpressRoute	Short Proposal Efforts	Not Required	Active 1 Day after EID received	Secure web-based One Drive and SharePoint	Commercial or Defense
Full Enablement	Long Term Work (90+ days)	Required	Laptop enablement: 10 Business Days	Native MS Applications, Teams, and E-mail	Commercial or Defense

Discovery

Accenture works with CISA stakeholders and Incumbent to understand and document existing functional and technical processes and policies.

Evaluation

Accenture determines potential transition impacts and documents needed changes for the corresponding processes and policies.

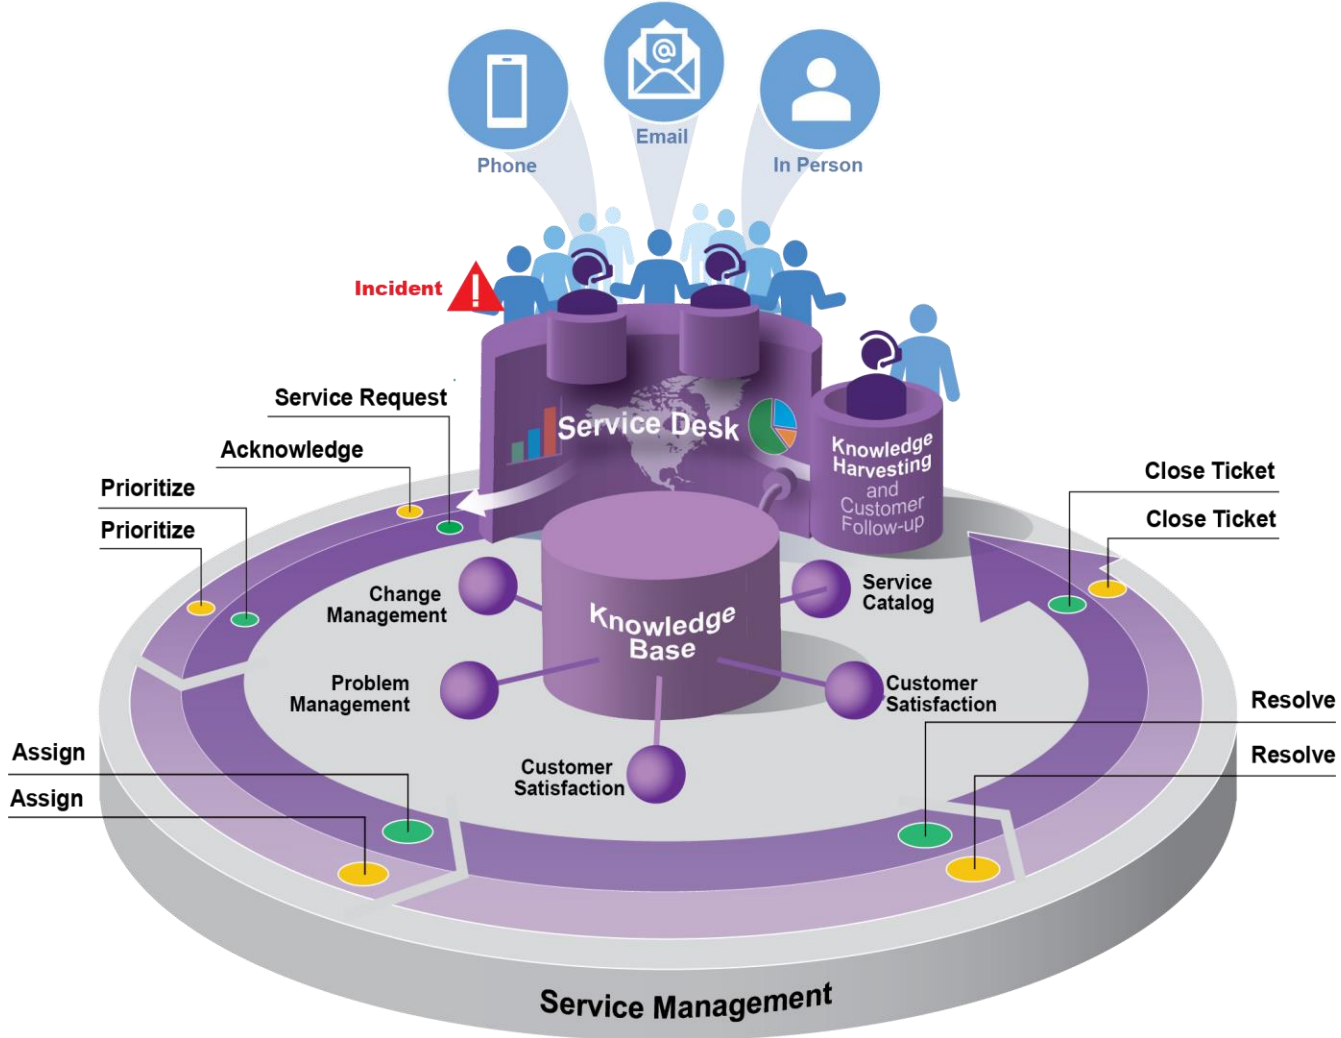

Implementation

Following CISA review, Accenture implements approved changes and communicates the actions and impacts to relevant stakeholders and customers.

ORF, ORS, IC1, IC2

The DOI Learner

70% – New Ways of Working

Learning built into the way of work, leading to increased flexibility collaboration & is part of the employee experience.

20% – Learning from Others

10% – Formal Training

Create a culture of continuous learning to promote new behavior adoption in a safe environment.

The DOI Learner

70% – New Ways of Working

Learning built into the way of work, leading to increased flexibility collaboration & is part of the employee experience.

20% – Learning from Others

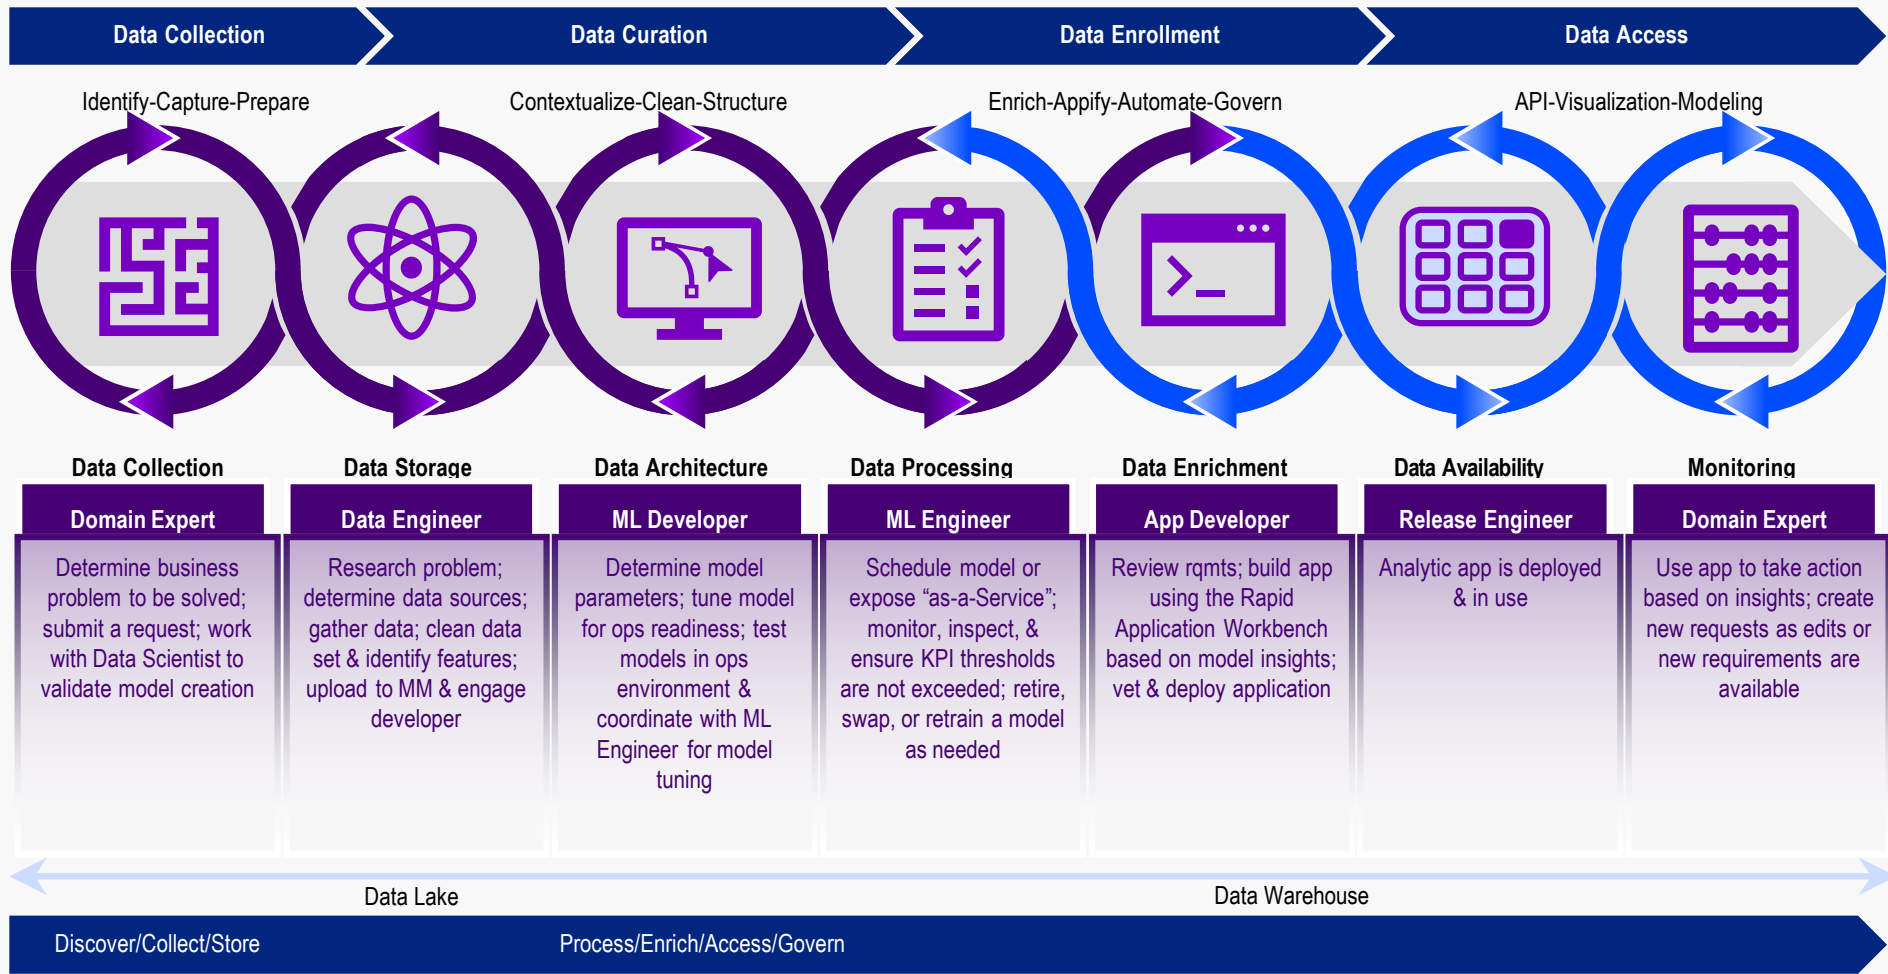

Encourage collaboration & opportunities to see best practices from others.

10% – Formal Training

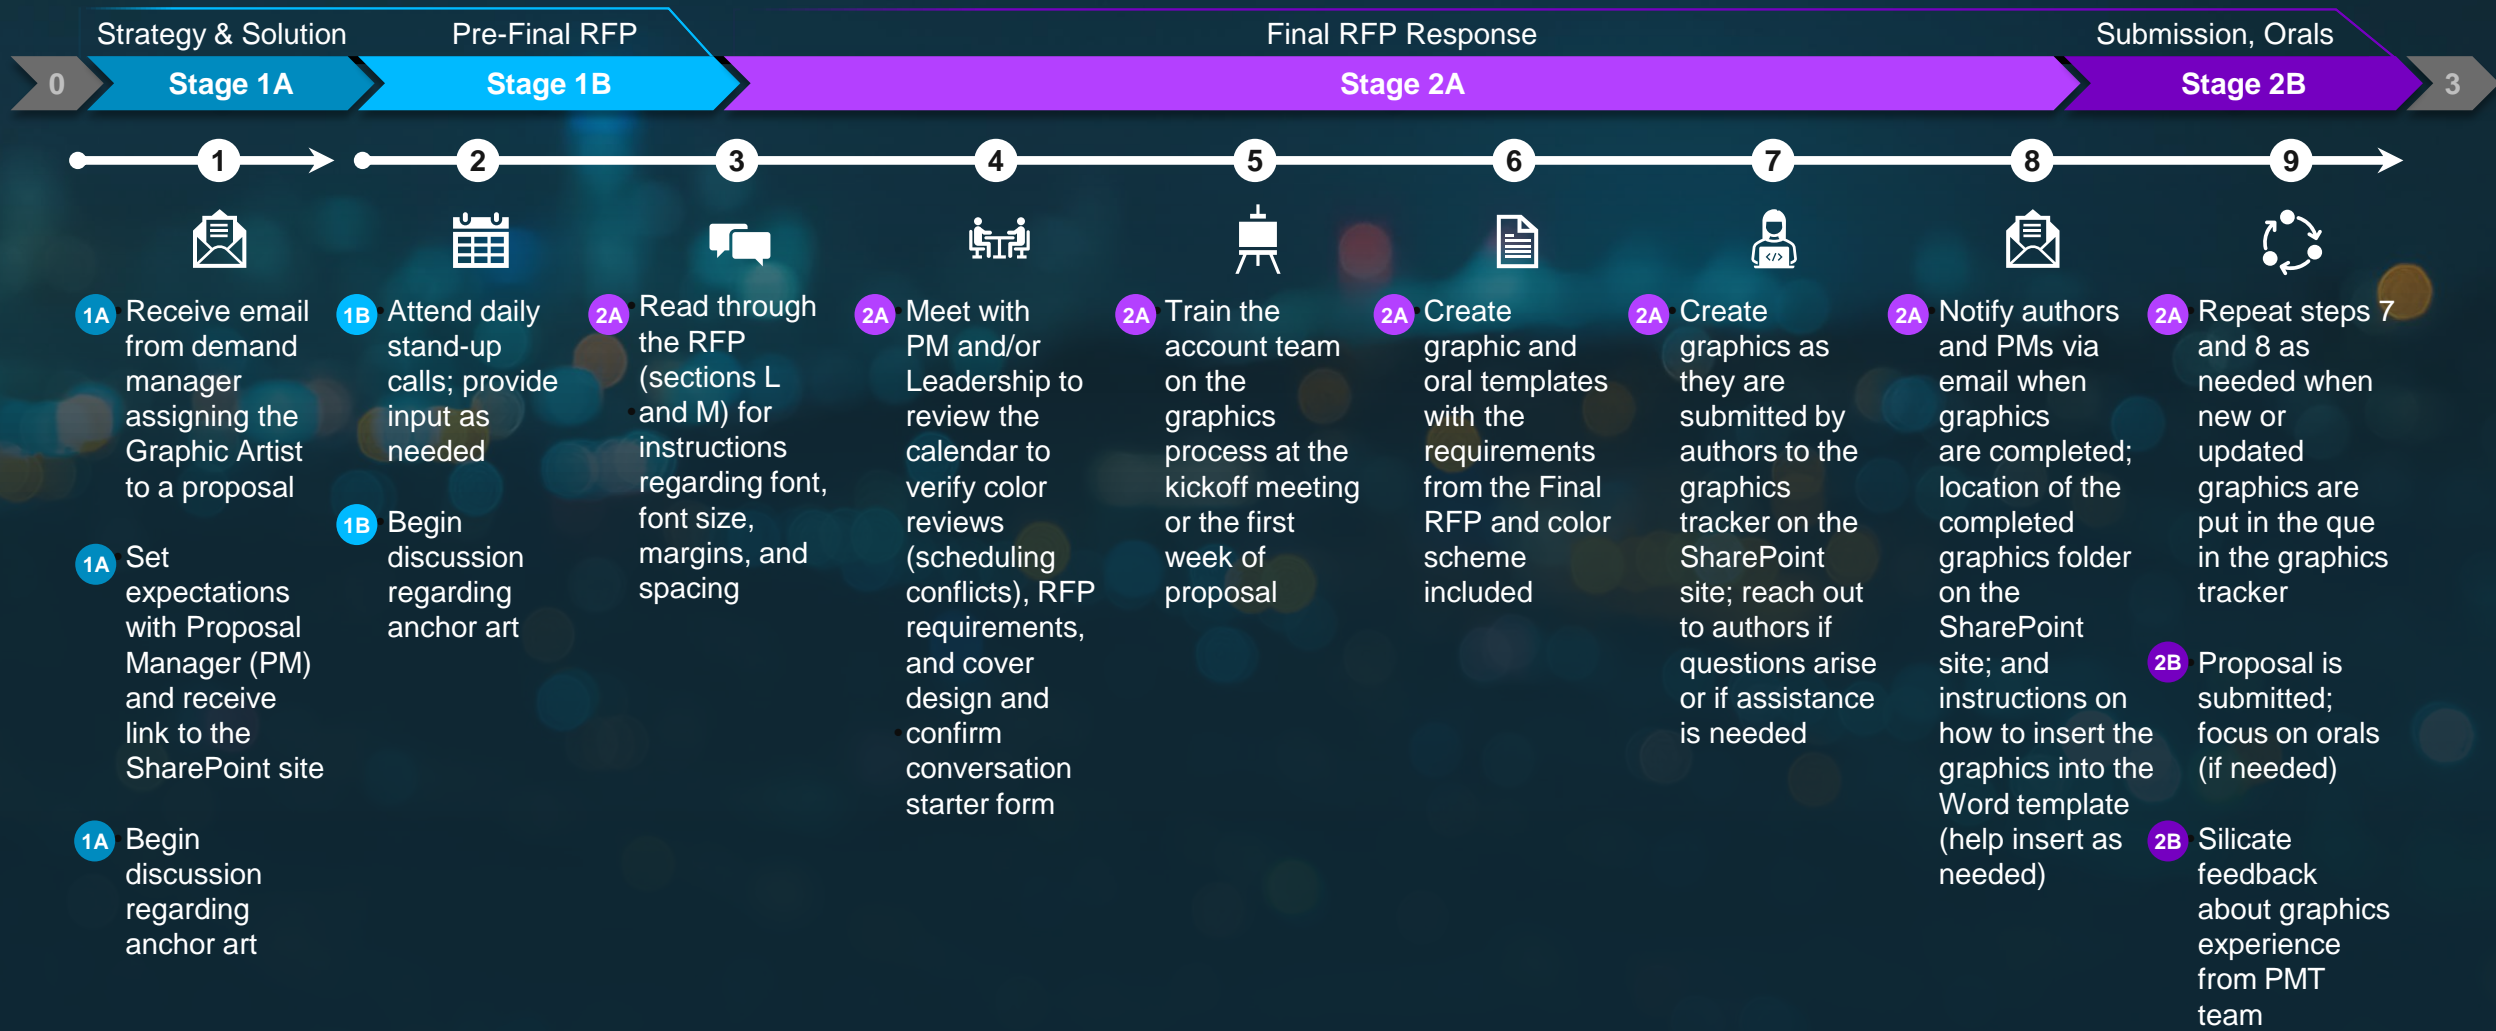

Create a culture of continuous learning to promote new behavior adoption in a safe environment.

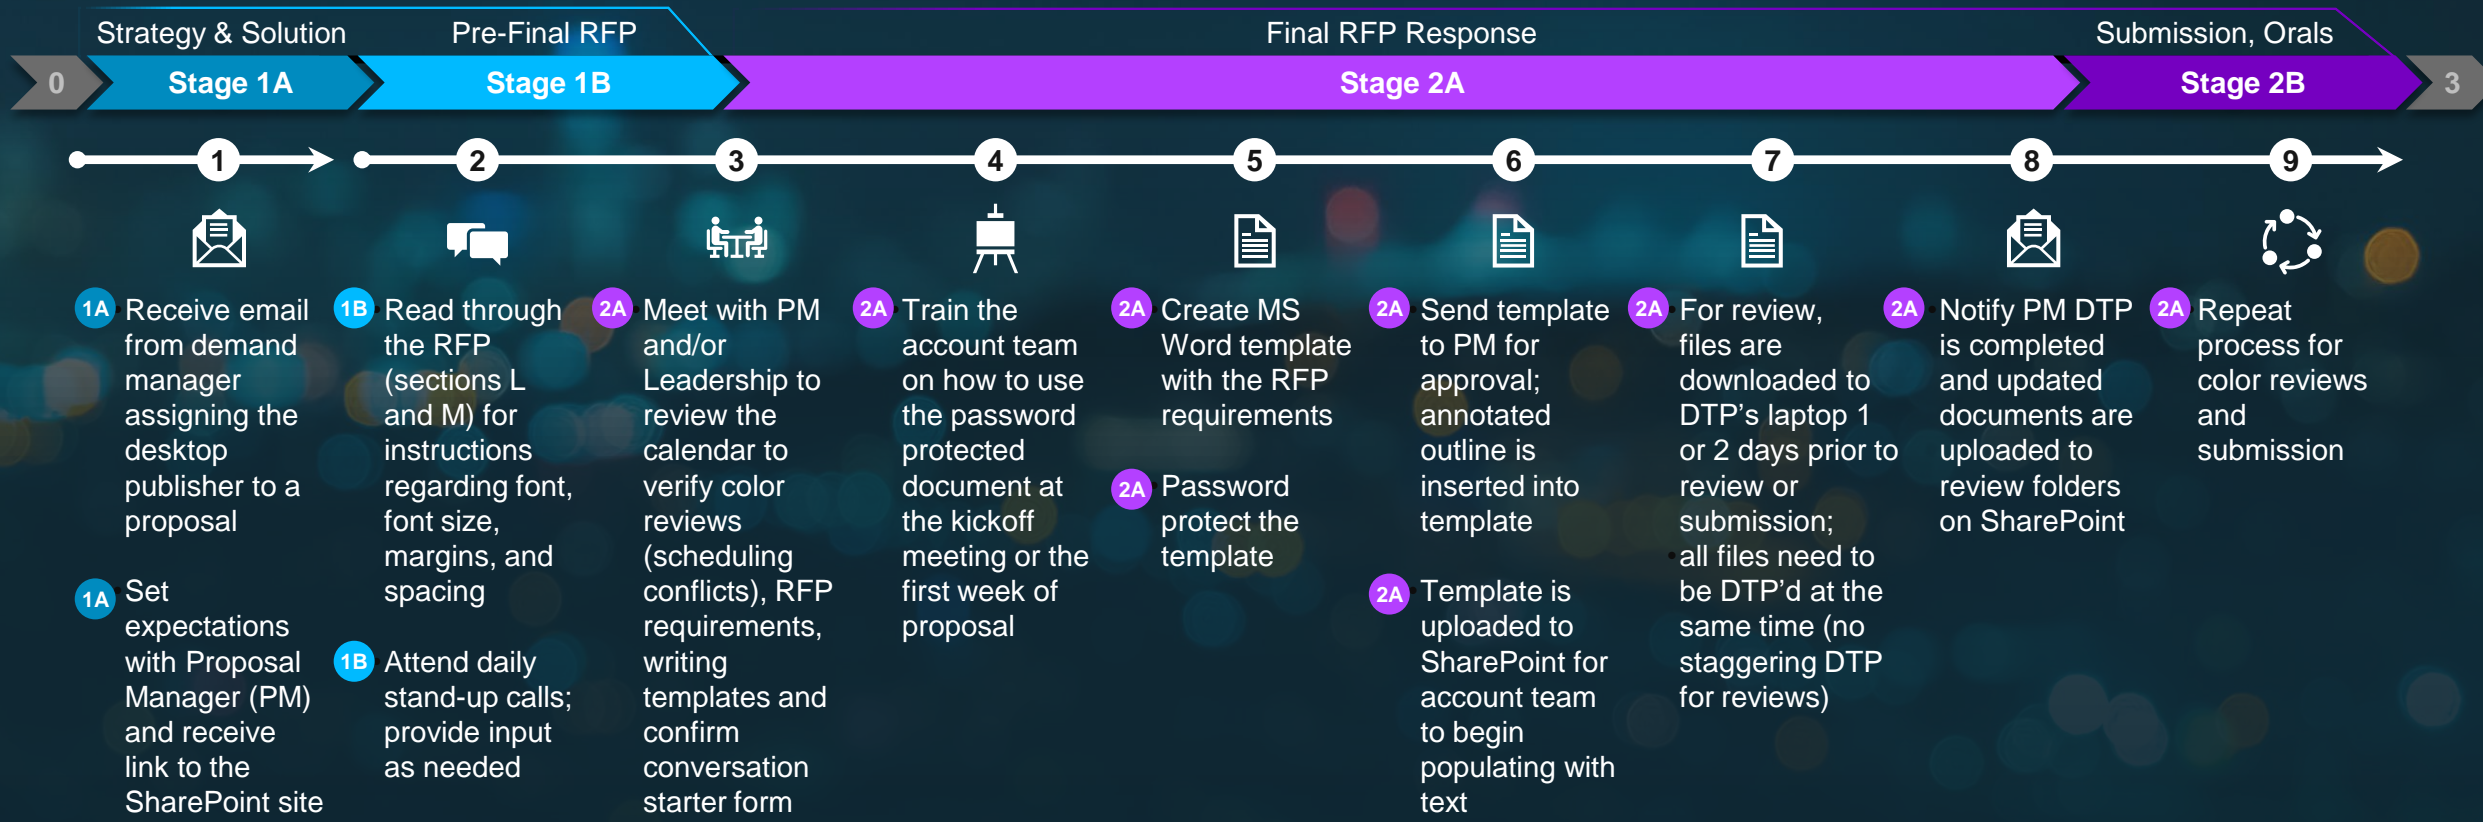

Stage 1. Draft Solicitation Release

Stage 2. Proposal Development

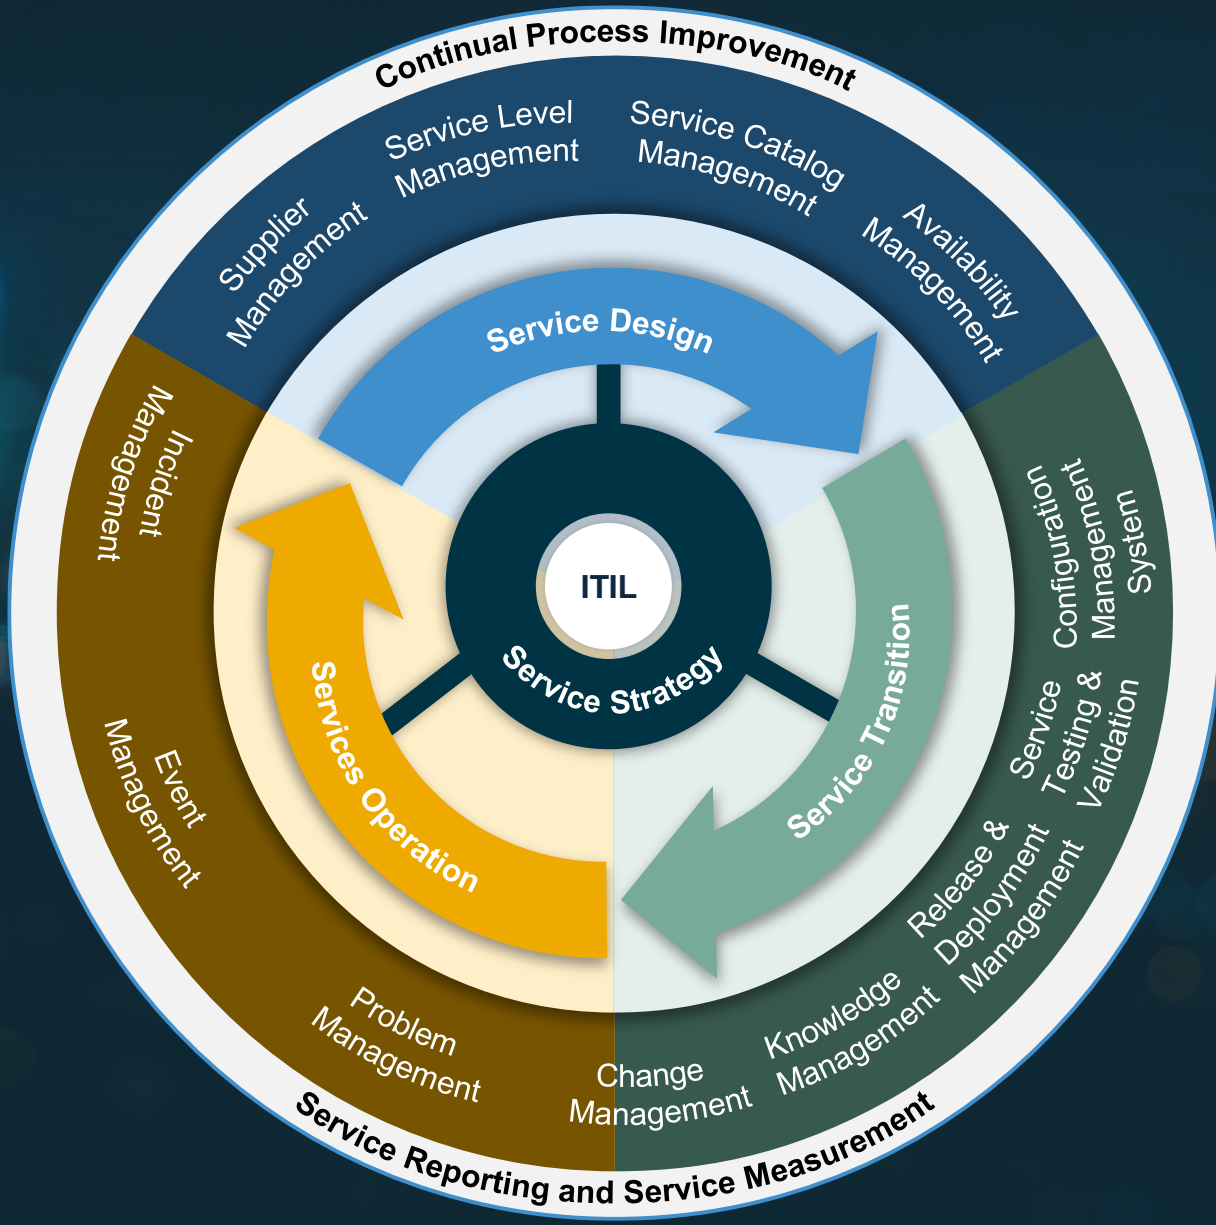

Stage 1. Draft Solicitation Release

Stage 2. Proposal Development

I have a basic understanding of HR Source and was aware of some items but didn't really understand their impact.

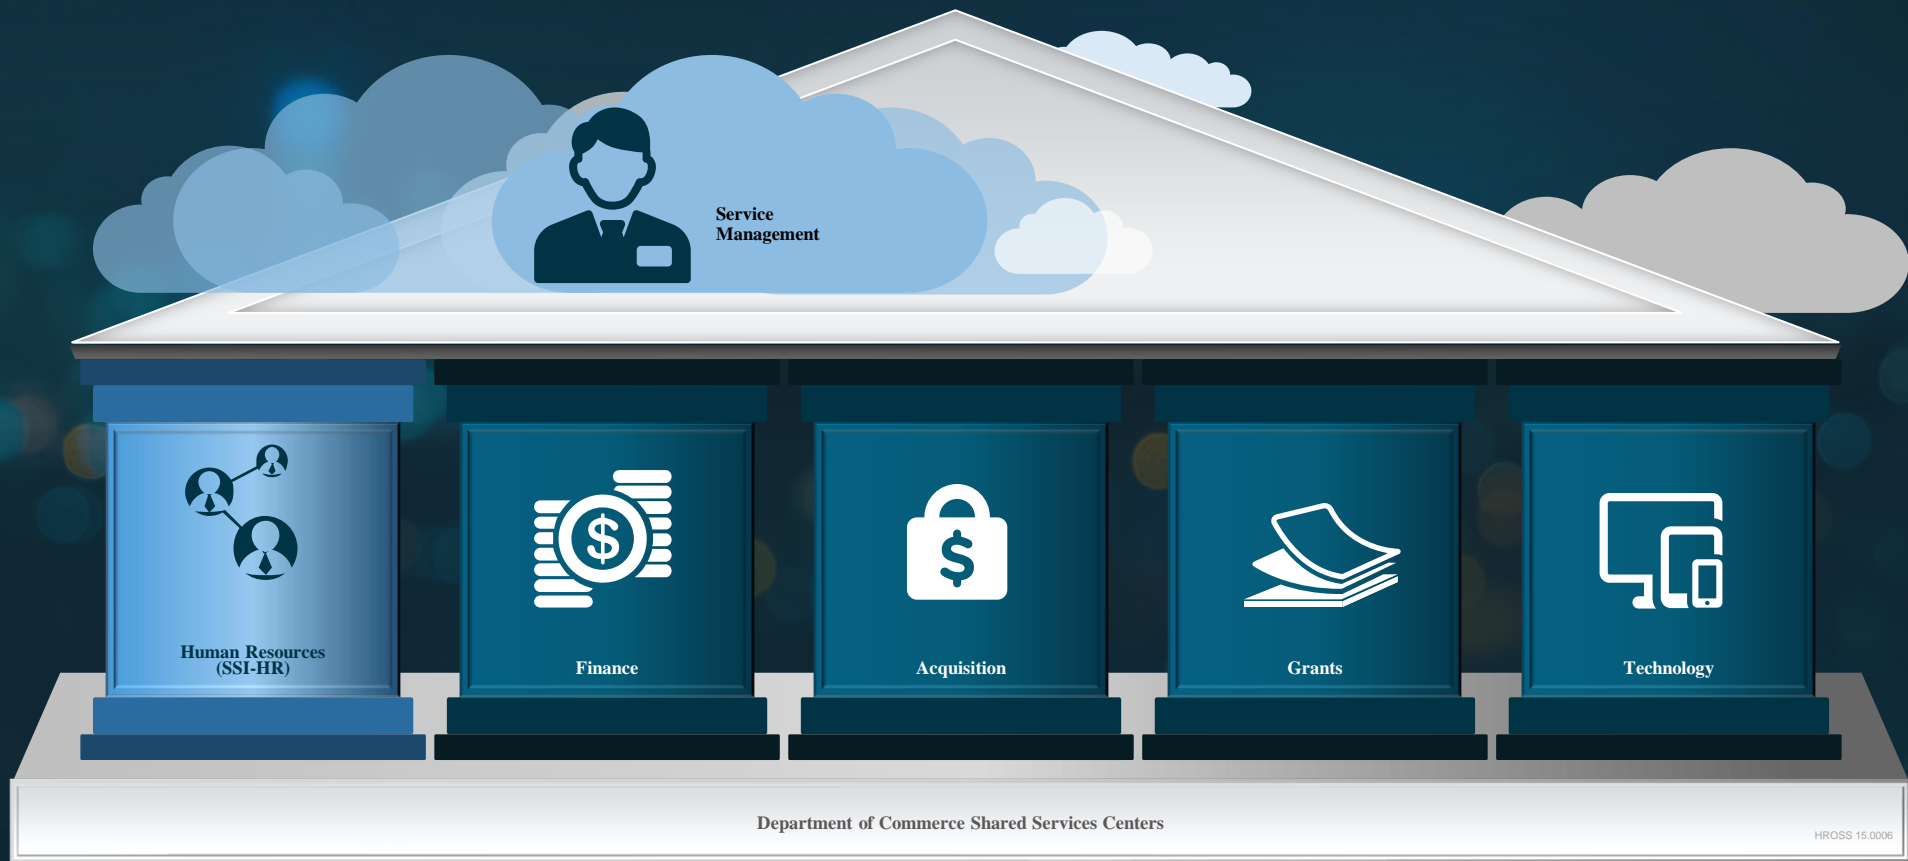

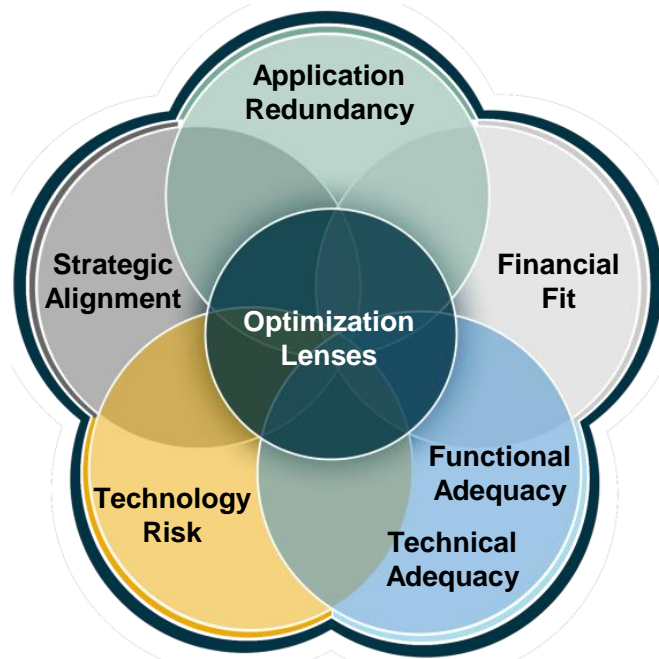

Excellence with presentation & preparation. Its all coming together so you can see the overall program. Loved it.

One of the best trainings I've ever been to.

- Conducted stakeholder analysis to identify 300+ core users for two user groups to deliver training across 56 locations.
- Surveyed users to identify knowledge gaps and system needs to develop tailored 3 day course curriculum
- Analyzed office size, geographic location, training facilities, employee count, historical applicant processing numbers, and transaction volume of end-users to identify 10 hosting Field Offices
- Developed 3 Day Instructor Led Training Course to include demonstrations and hands-on activities

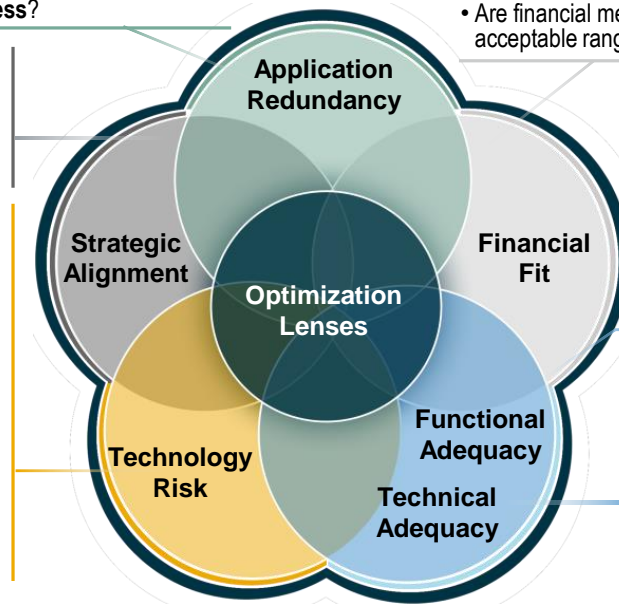

- Does the application **overlap with the function of another application**?
- Are there **multiple applications supporting the same business function or process**?

- Is the application **aligned to the business and IT strategy**?
- Does the application provide a **competitive advantage**?

- Is the application **aligned to technology or architecture standards**?
- Are the **technologies utilized supported by their respective vendors**? **When does support end?**
- What is the current **MAC level**?
- Does the application have an **active ATO**?
- **Does it complete with DoD IAVA requirements and standards**?

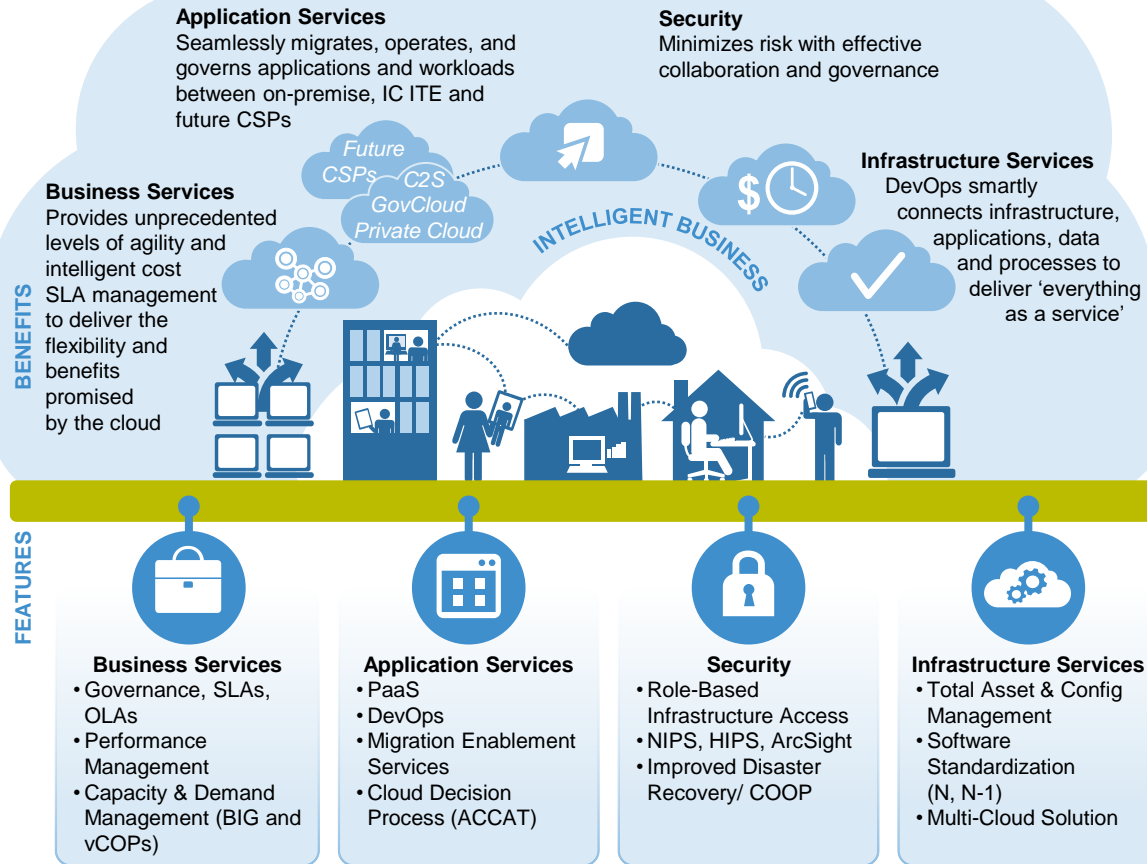

- Is the overall **cost of ownership in line with the benefit delivered**?
- Are there **alternative/less expensive ways** to serve up the application and **reduce overall cost**?
- Are financial metrics such as **cost per change or cost per transaction** in acceptable ranges?

- What is the **level of completeness of the application functionality/ features**?
- Does the system **meet current and future requirements**?
- What **flexibility** does the application provide to adapting to product innovations or changes and **how difficult and costly is it change**?
- Does the **availability of the application** meet expectations /agreements with the business?
- What is the level of **accuracy of data/information**?
- Is the application **easy to use and meets customer/end user expectations**?

- Is the application **scalable, extendable and flexible to meet future needs**?
- Is the application **stable and reliable**?
- Does the application meet expectations on **maintainability, operability and performance**?
- Is the **technology a viable solution for continued growth**?

100,000+

Women work at Accenture

36%

Women make up a large proportion of our global workforce.

Ethnic diversity

At Accenture our workforce is made up of highly motivated employees who reflect the cultural diversity of a global marketplace.

Lesbian, gay, bisexual and transgender

Ensuring an inclusive environment for LGBT employees across the globe is a key and integral part of our global inclusion and diversity strategy.

Build awareness

Persons with disabilities

To build awareness and understanding, we sponsor networking and information sharing and encourage the provision of reasonable accommodations, to a job or work environment.

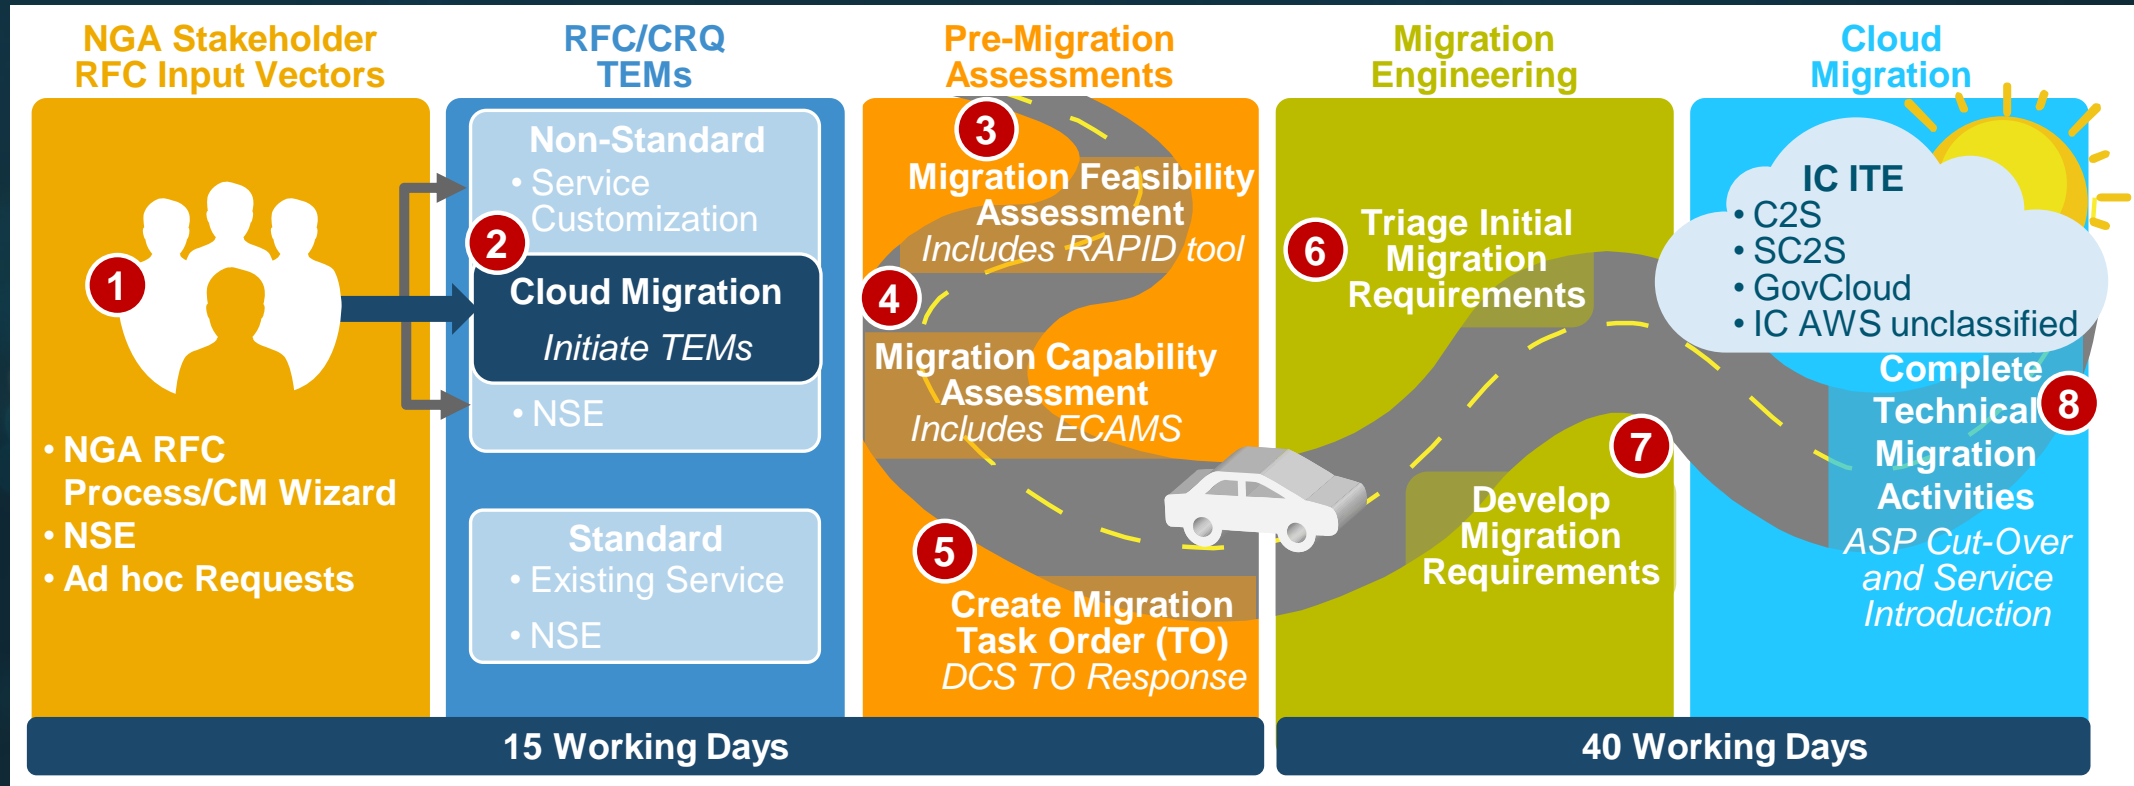

Cross-cultural diversity

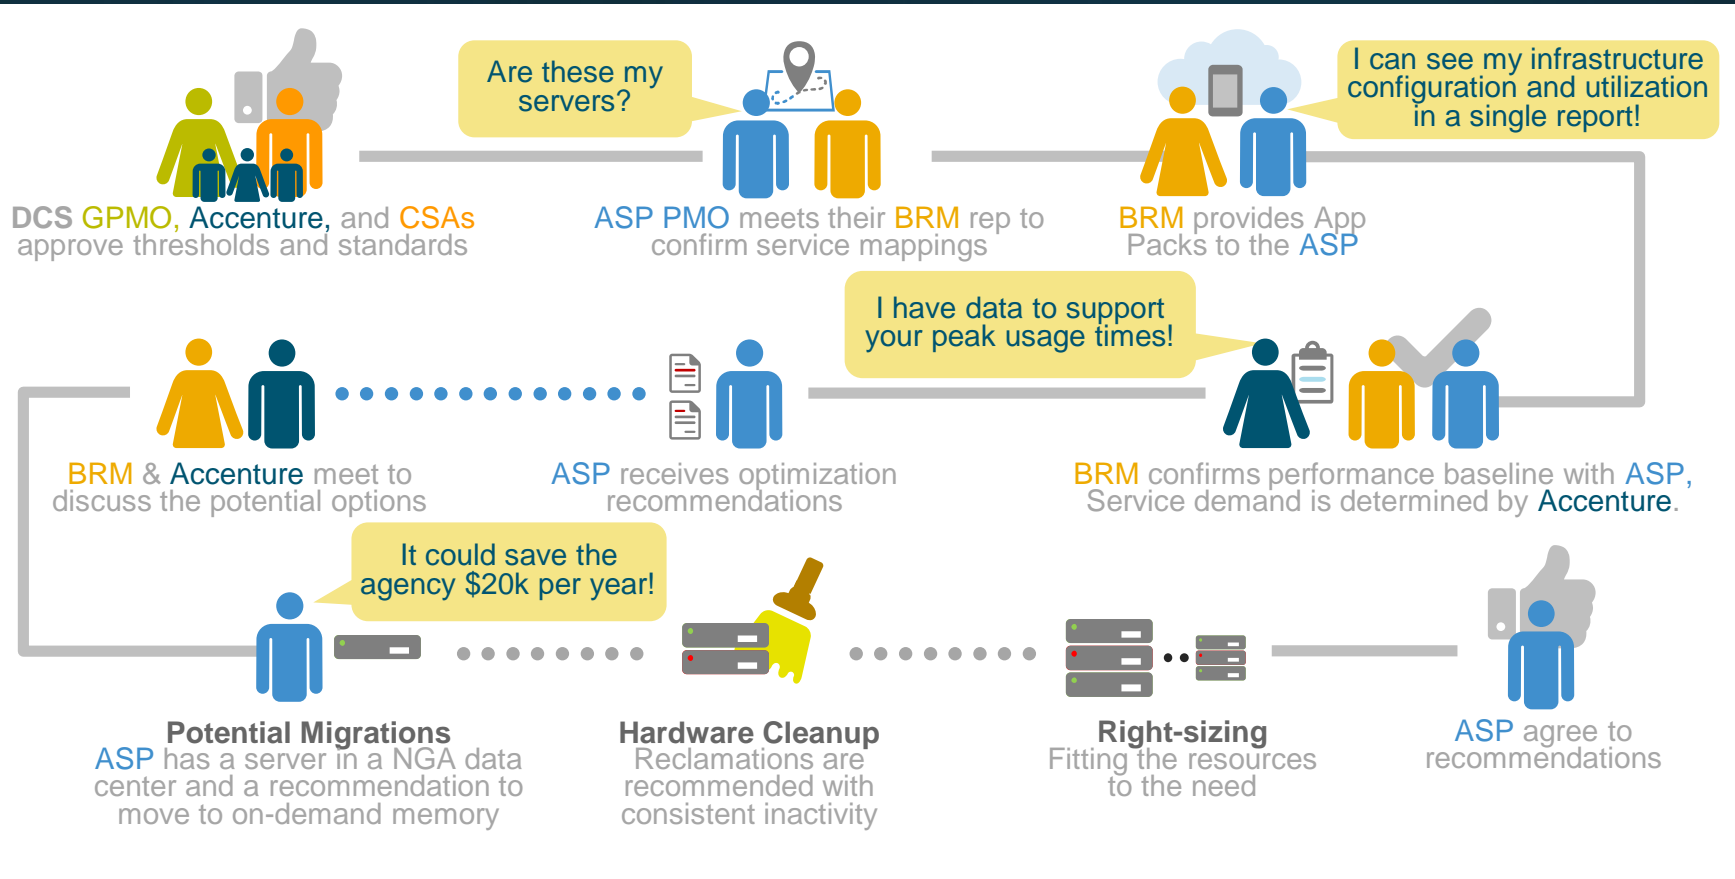

We offer tools and training to foster more effective interactions across cultures.

Benefits

Demand & Capacity Management puts the right capabilities on the right effort at the right time

Customer Experience
Team provides the voice of the customer and creates the trust that produces results

Agile SAFe Methods speed service delivery & customer value

Data and analytics produce unprecedented transparency and proactive management

“Hi. I am your personal advocate. How may I help you today?”

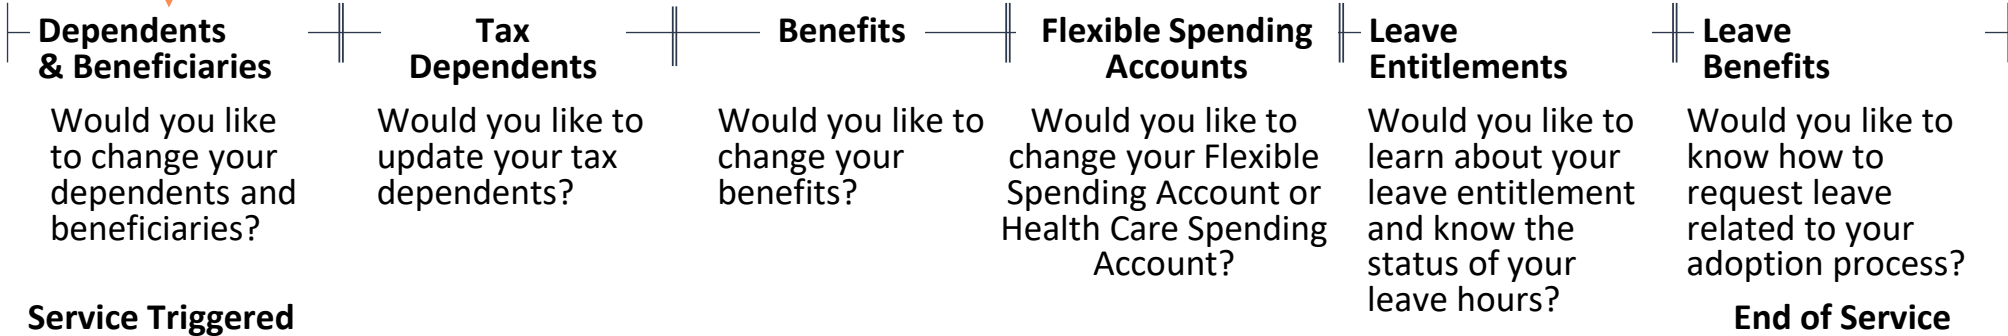

“I am in the process of adopting a baby and would like to add my child as a dependent to my health coverage.”

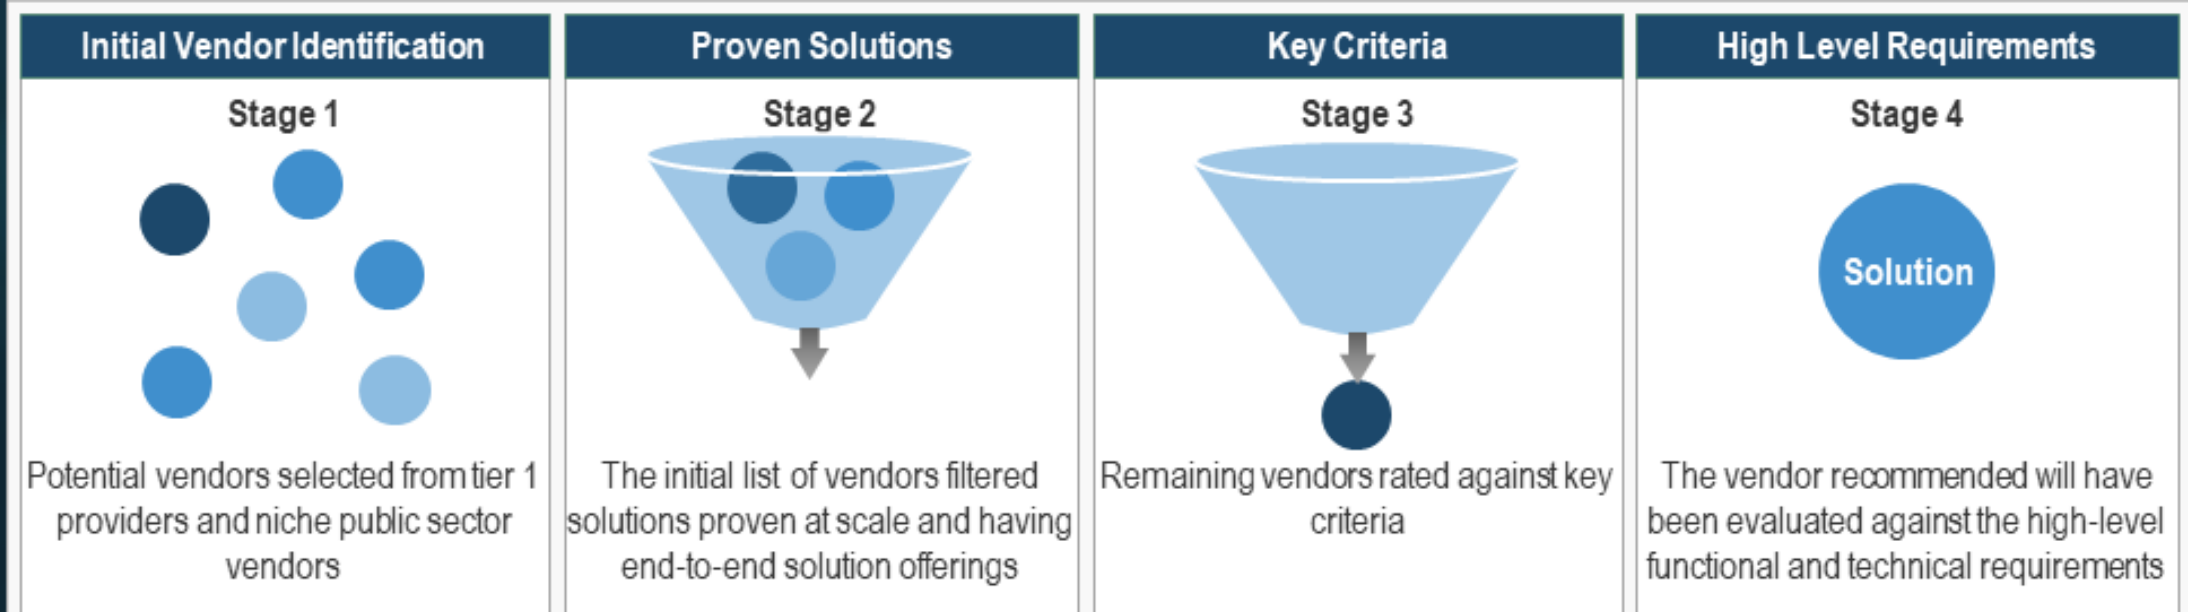

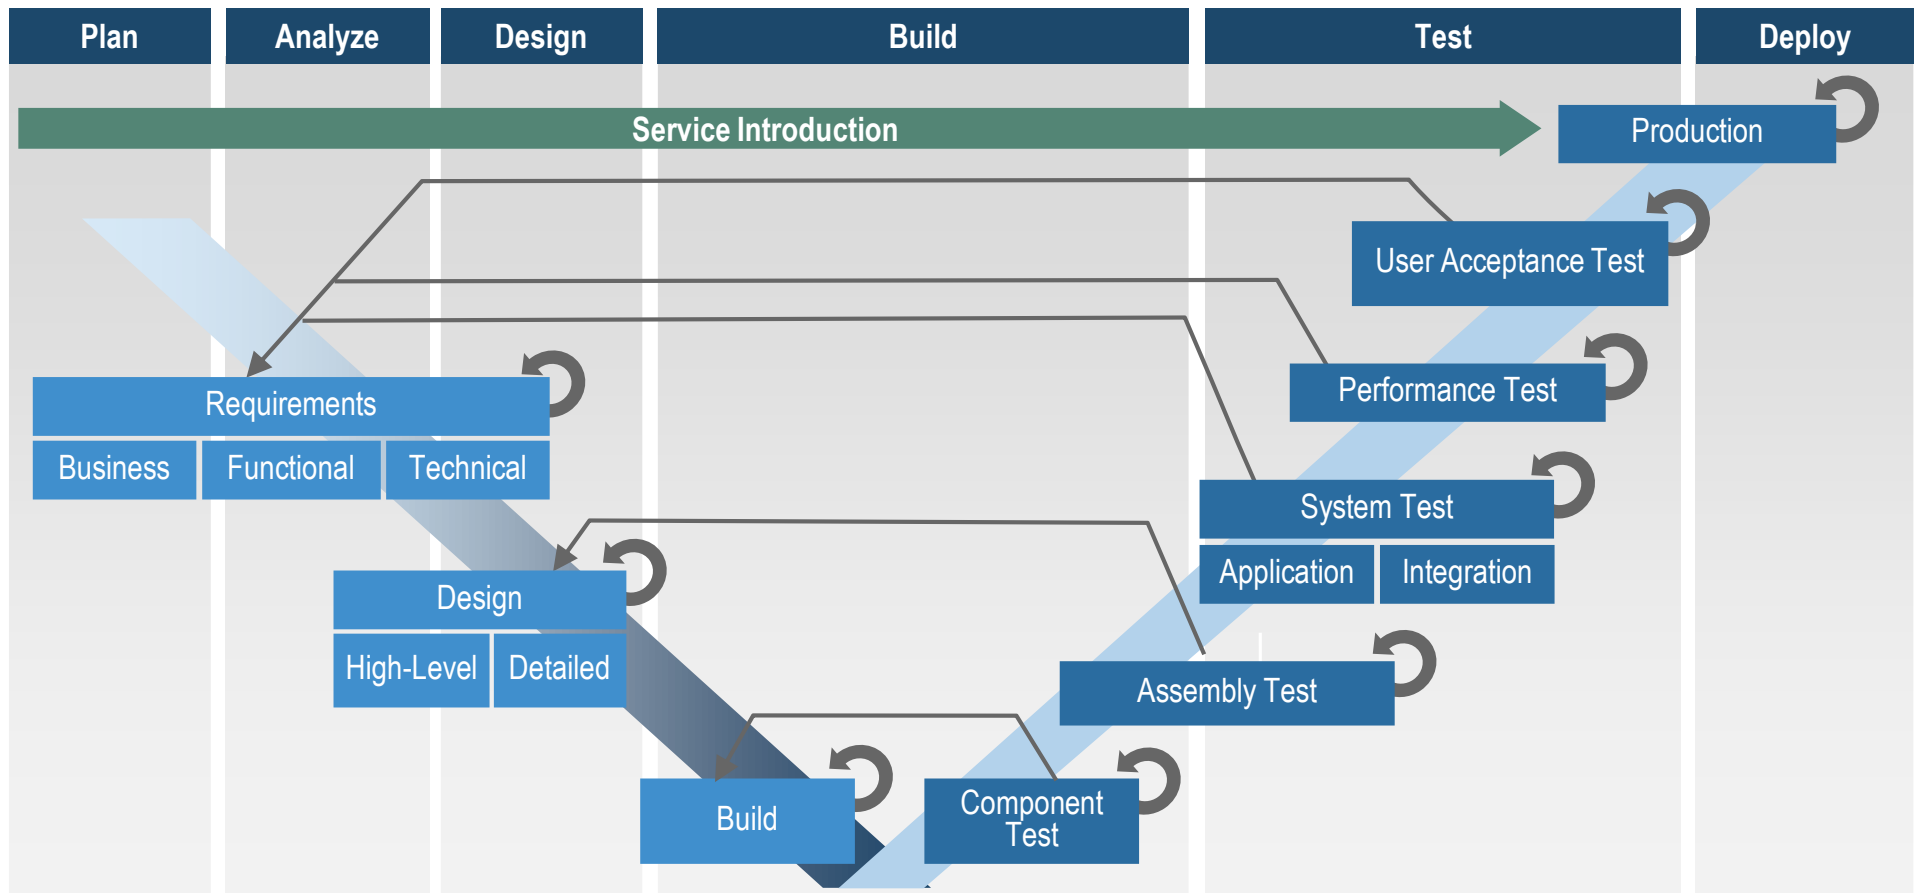

“I can help add a dependent to your health coverage. Let’s get started by going over a few things.”

End-to-End Services

Our solution owner decomposed the IRS provided user stories into single sprint backlog items. The backlog items and definition of done was stored in JIRA. The team collaborated on this process and the remaining steps as well using Slack and Skype.

Our designer pulled the stories and generated UI and UX designs and presentation assets in Photoshop. The solution owner reviewed the designs and collaborated on updates in real time during the review. "Hallway" usability testing was performed on the designs.

Designs and assets were stored in git for change control and the developers were notified of the change both automatically and during the scrum meetings as well as being able to see the status of the work in JIRA.

The developers employed Test Driven Development (TDD) and began by writing unit tests in Jasmine using the IntelliJ IDEA IDE. These tests supported both front end and back end testing.

Before integration is allowed the code was subjected to code review in Crucible. Action items were tracked and acted on before code could proceed on to integration. Notifications are sent via email.

Once the tests are run successfully locally the developers pushed their code to our locally hosted git repository and updated the JIRA status for the backlog items.

After all tests are written the developers were able to create the code for the backlog items from the designs provided using the selected application stack, in this case a MEAN stack application.

Browser based automated tests were generated using Karma.

Jenkins detected the confirmed git check-ins and began the DevOps process to test, build and deploy the code. Notifications are sent to the team via the team's Slack collaboration platform.

Grunt built the application and ran Grunt Uglify and Less consolidation and minification tools to optimize the application.

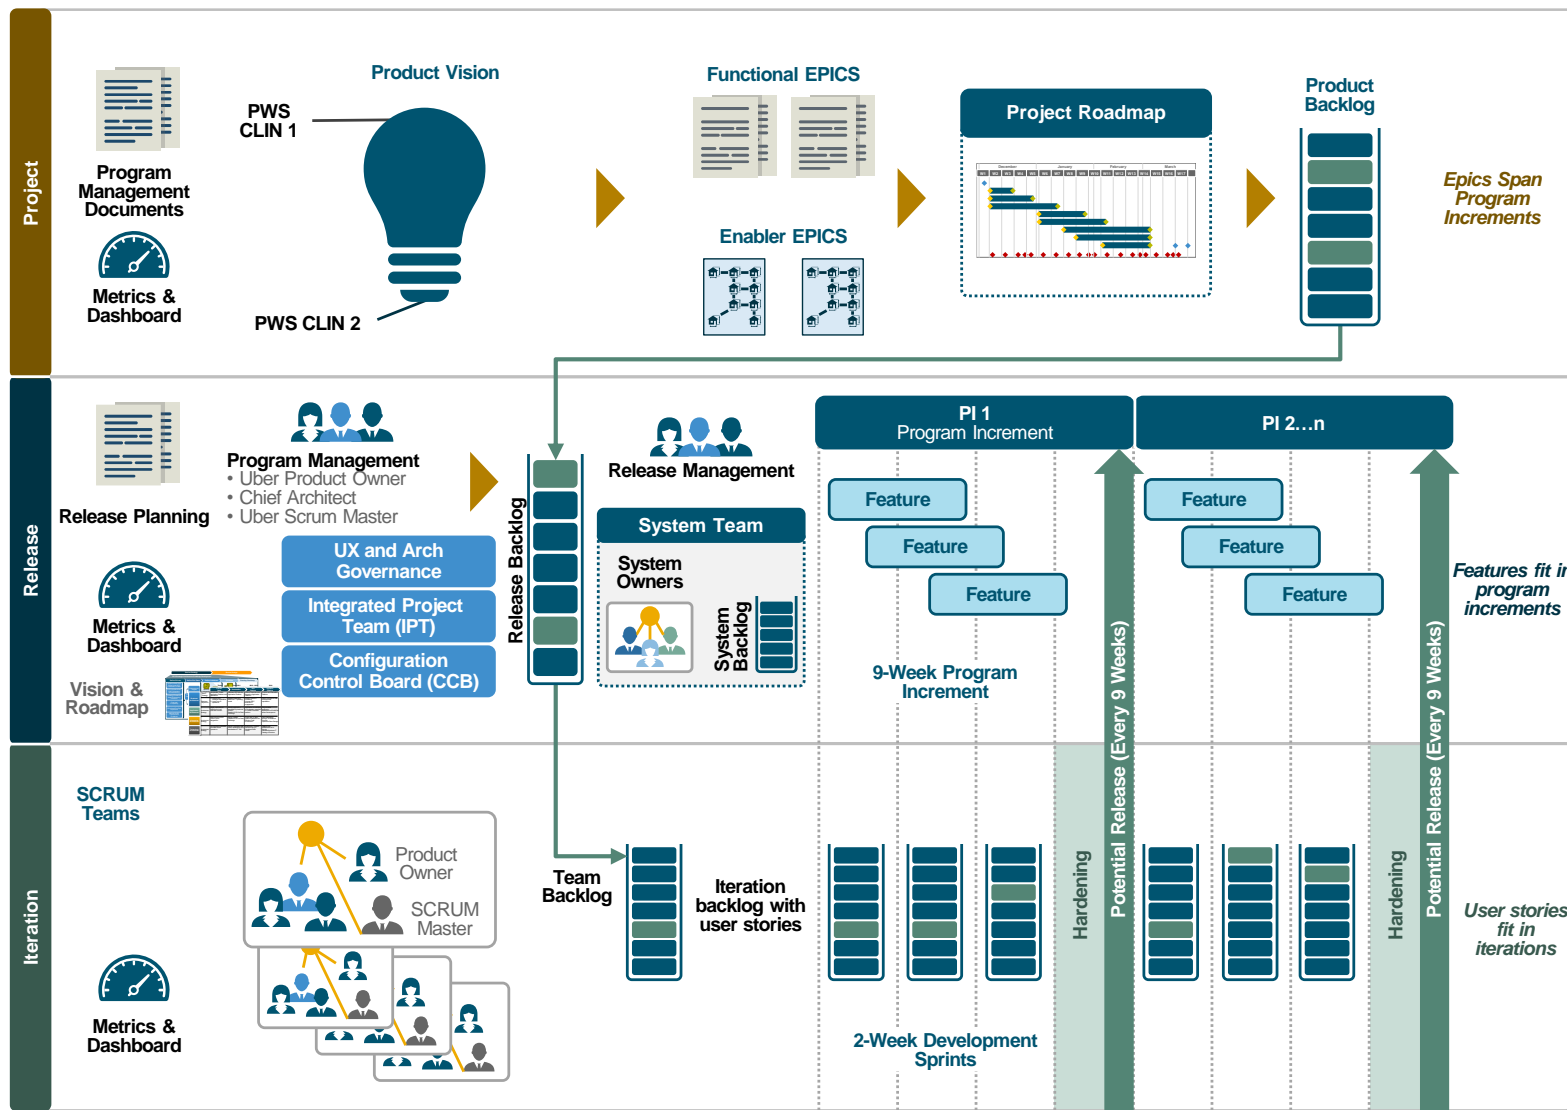

Testers and the solution owner reviewed the alpha code and document the results in JIRA. The designer and developers responded to requested changes and new backlog items were generated as needed from a review of these test results.

Grunt ran the Jasmine and Karma tests and deployed the tested application to the internal alpha site.

This workflow is a subset of what Accenture's standard AOWP would typically involve. These steps were selected and implemented in order to provide a best showcase of how our process works but a full enterprise solution workflow was not a practical option for this demo. Among the features not demonstrated here are automated quality metrics. Additionally the automated test infrastructure is relatively slim for an enterprise application, but still comprehensively covers all use cases for the solution.

Operations & Maintenance FY16

Candidate Selection FY15

Employee & Job Profiles FY14

HR Processing FY13

Conducted Change Impact Assessment for **1,100 Bureau employees** performing **80,000 FBI actions**

Performed stakeholder management activities to over 8 field offices with **250 representatives**

Conducted instructor-led training, online web tutorials, conference call help sessions, and comprehensive training guides and job aids

Impact: **1,500 employees**

Impact: **30,000+ employees**

Impact: **30,000+ employees & all future applicants**

Impact: **30,000+ employees & all future applicants**

Deployed to **over 30,000 employees nationwide** in three waves

Implemented **2 Change Networks** over 11 months with **200+ stakeholders**

Provided instructional Lync training courses and coordinated on-site training in **13 different regional locations**

Organized **141 to-be activities** into 22 clearly defined roles and 18 jobs

Conducted **47 task analysis interviews** with 84 process SME's for the Capacity Plan model

Developed **Capacity Plan** to estimate the impact to workload for each role/job annually to perform Talent Acquisition activities

Conducted Change Impact Assessment that identified **46 high-level changes**

Developed and delivered training to **over 1,800 employees**

Conducted 8 monthly Change Network Meetings with **over 175 participants** from across the US

Organized and conducted Roadshow training for **10 field offices** and **190 Participants**

Founded pilot group of **116 Super Users** to sustain HR Source expertise in the Field

Facilitated 29 Stakeholder Meetings to gather requirements and provide demonstrations of enhancements for

172 Change Request Tickets

Delivered over **130 Change Communications** to end-users during rapid release cycles

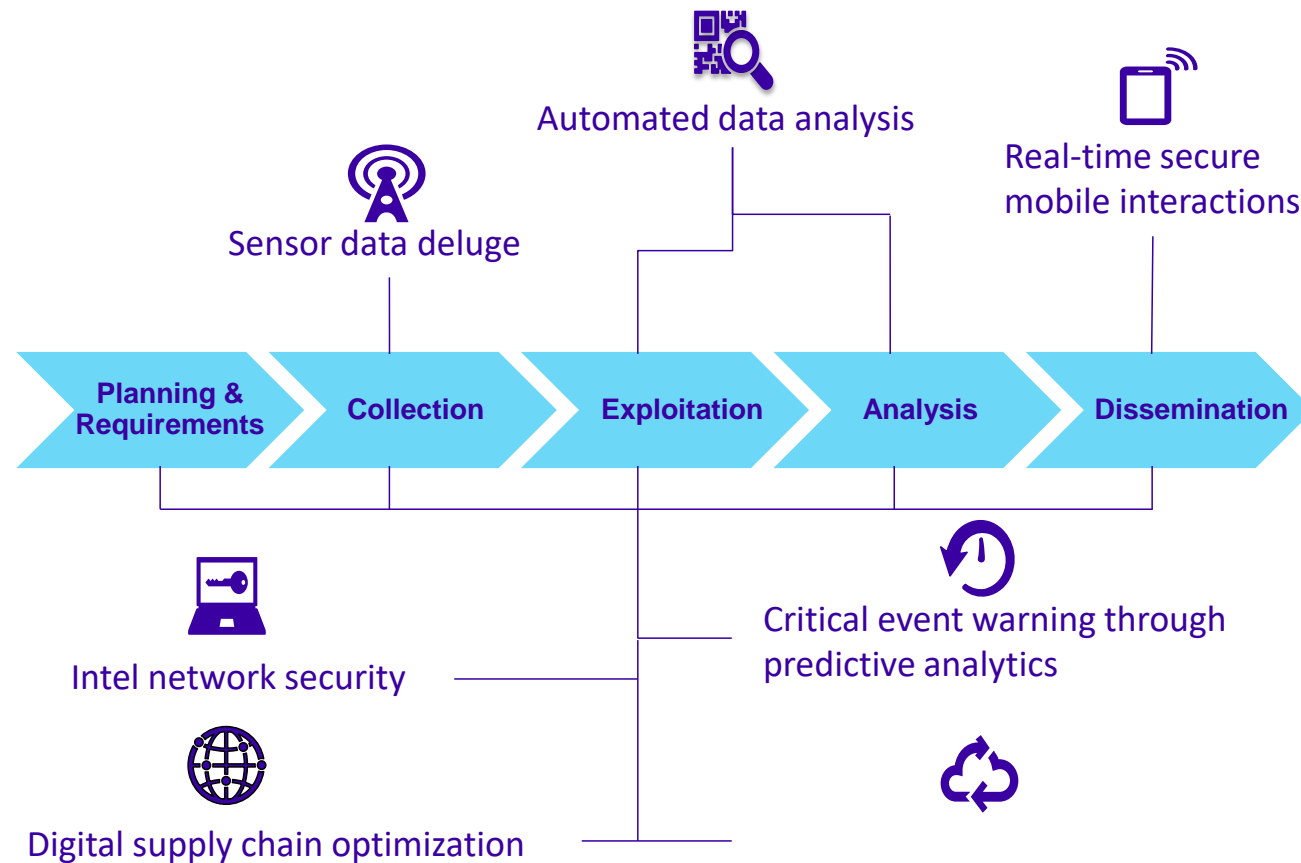

Delivered **28 Training & Officer Hour Sessions** on functionality updates

Game changing technologies drive the Digital intelligence supply chain.

Delivering actionable intelligence in this new digital world demands integration and agility.

Risk Evaluation

1. Risk Identification & Analysis

- Anticipate problems through close management of project phase
- Identify risk and evaluate through evaluation process

2. Risk Assessment & Prioritization

- Probability: High
- Impact: High
- Risk Evaluation: High

Risk Evaluation

3. Risk Mitigation Planning & Handling

- Identify risk mitigation plan/strategy
- Detailed mitigation steps
- Reference successful solutions and apply
- Plan for potential issue resolution

4. Risk Monitor & Reporting

- Program management review
- Executive oversight review (if required)
- Generate feedback
- Risk status reports
- Continue monitoring

- Detailed tool to show progress, inter-relationships and dependencies
- Critical path visibility to direct management emphasis

Data Migration solution works Data Staging Environment

Accenture has helped SAP's global IT organization harness the power of SAP HANA by migrating SAP's own enterprise resource planning (ERP) system. The migration included all productive ERP modules and took place over a period of five months. Moving the entire ERP system to HANA sends a powerful message to the market about the possibilities HANA offers, and confirms the feasibility of transforming rapidly and achieving significant performance gains across the enterprise.

Accenture SID

DLA

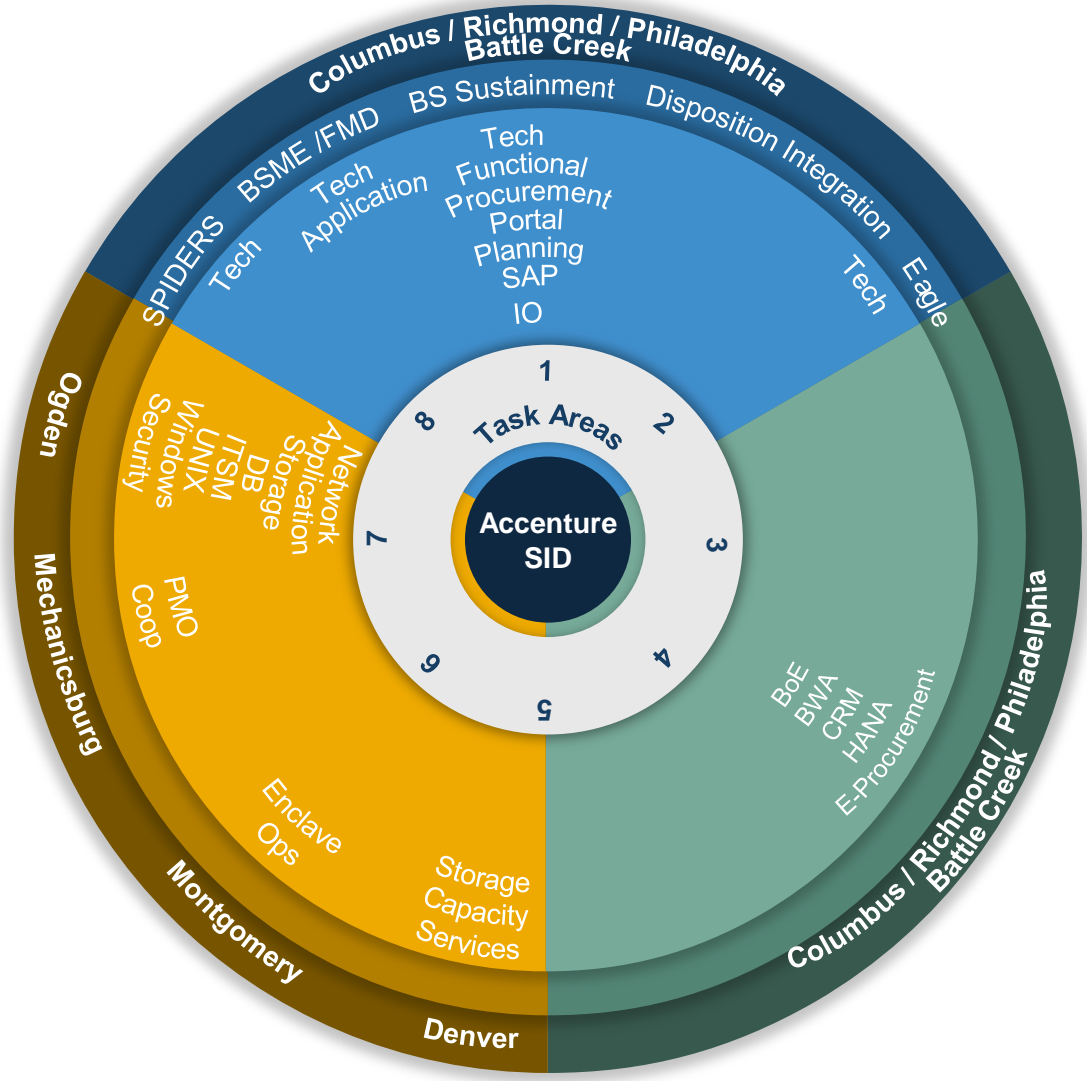

- Configuration and build documentation coordination for implementation into production
- Software tech refresh coordination
- Mission Partner Life Cycle tracking for Information Assurance requests
- Annual Maintenance Win-dow Schedule coordination
- Out of cycle maintenance coordination
- New Application functionality planning and coordination
- Mission Partner requested change coordination
- Submission of vendor patches on behalf of mission partner

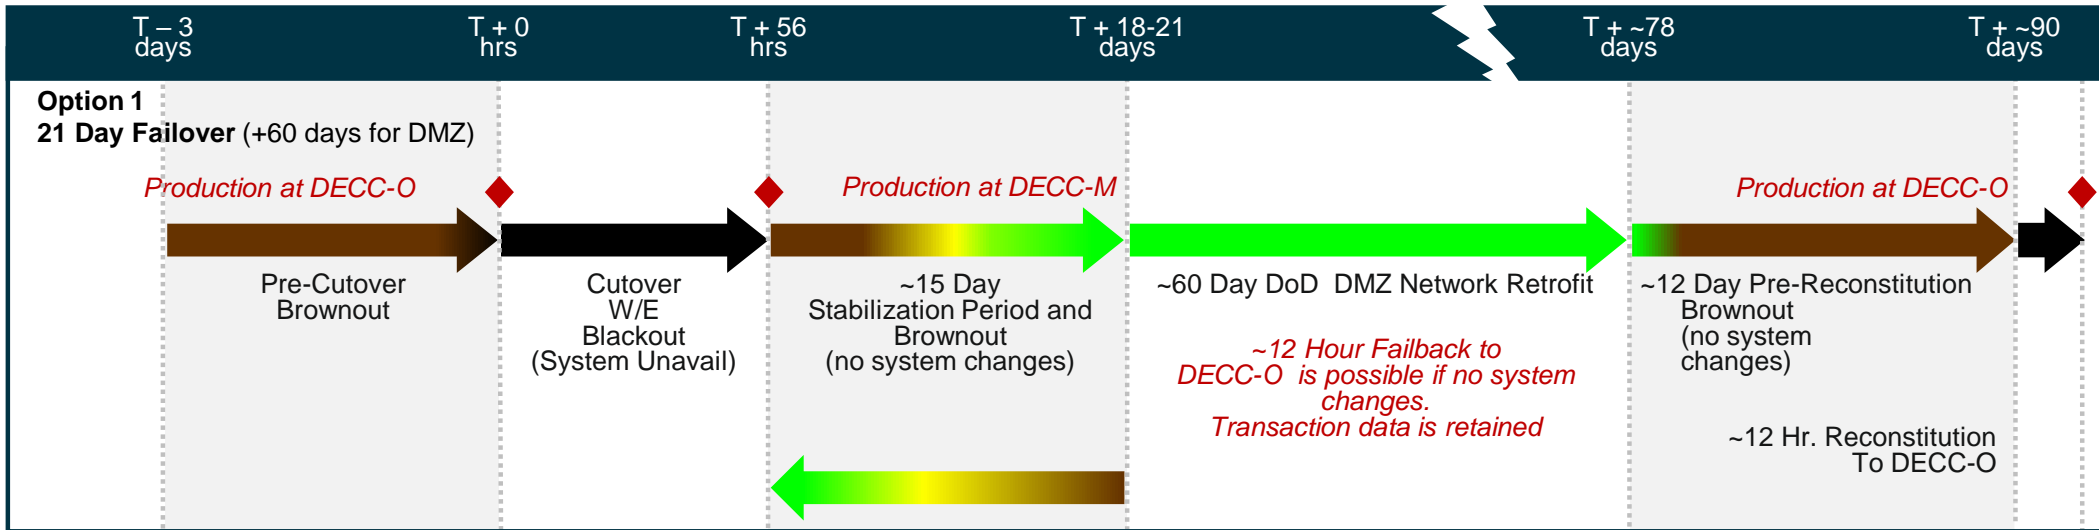

Shared

- New architecture and application implementation
- Security policy change coordination
- Coordination of ECA, IPC, IAVM, vendor patch bundles, HBSS, STIGs, SRG, CCRI and ACAS
- Cyber Command Security Tasking Coordination
- Batch process change coordination

1	Finalize User Stories	Milestone: Finalize User Stories in advance of the start of a sprint to accurately plan and size stories.	Agile Team, Product Owner
2	Sprint Planning & Commitment	Agile Ceremony: Hold sprint planning at the beginning of each sprint to finalize the prioritization of stories, size stories and decompose tasks, and establish and commit to sprint scope.	Agile Team, Product Owner
3	Daily Scrum	Agile Ceremony: Hold a 15-minute meeting daily to report progress and impediments.	Agile Team
4	Story Grooming	Agile Ceremony: Hold story grooming weekly to continuously refine and re-prioritize the backlog.	Agile Team, Product Owner, Stakeholders
5	Sprint Review	Agile Ceremony: Provide a demo of new features developed during the sprint to the Product Owner and stakeholders at the end of every sprint.	Agile Team, Product Owner, Stakeholders
	User Acceptance Testing	Milestone: Following the demo of new features, invite stakeholders to perform hands on user acceptance testing using test scripts developed by the Agile Team.	Agile Team, Product Owner, Stakeholders
6	Training Revisions & Release Notes	Milestone: Update training documentation to reflect new functionality and distribute release notes to users at the conclusion of each release.	Agile Team
7	Sprint Retrospective	Agile Ceremony: At the conclusion of each sprint, the team analyzes and makes the changes necessary to improve their performance.	Agile Team, Product Owner
8	Production Release	Milestone: Deploy new functionality to Production.	Agile Team

VALUE Delivery Approach

- Engage in meaningful discussion around what Salesforce application can do “out of the box” and make trade off decisions on configuration vs. customization to meet business requirements
- Identify gaps, process issues and/or policy concerns for resolution with time to react

Business Requirements and Processes

Iteration 1 - Scope

Do Requirements Address Business Specifications?

Multiple-Session Process:

Understand Objectives by capability and define service metrics to drive value

Understand “out of the box” capabilities through live demonstrations

Review business processes and use cases against live application

Consider requirement effort against technology trade-offs and expected value

Iteration 2 - Design

Does the Design Address Business Specifications?

Multiple-Session Process:

Review configuration application design against business process enhancements

Take feedback and make real-time design changes

Review full capacity design

Take feedback and make real-time design changes

Iteration 3 - Build

Does the Solution Address Business Specifications?

Multiple-Session Process:

Review partially configured application against business process enhancements

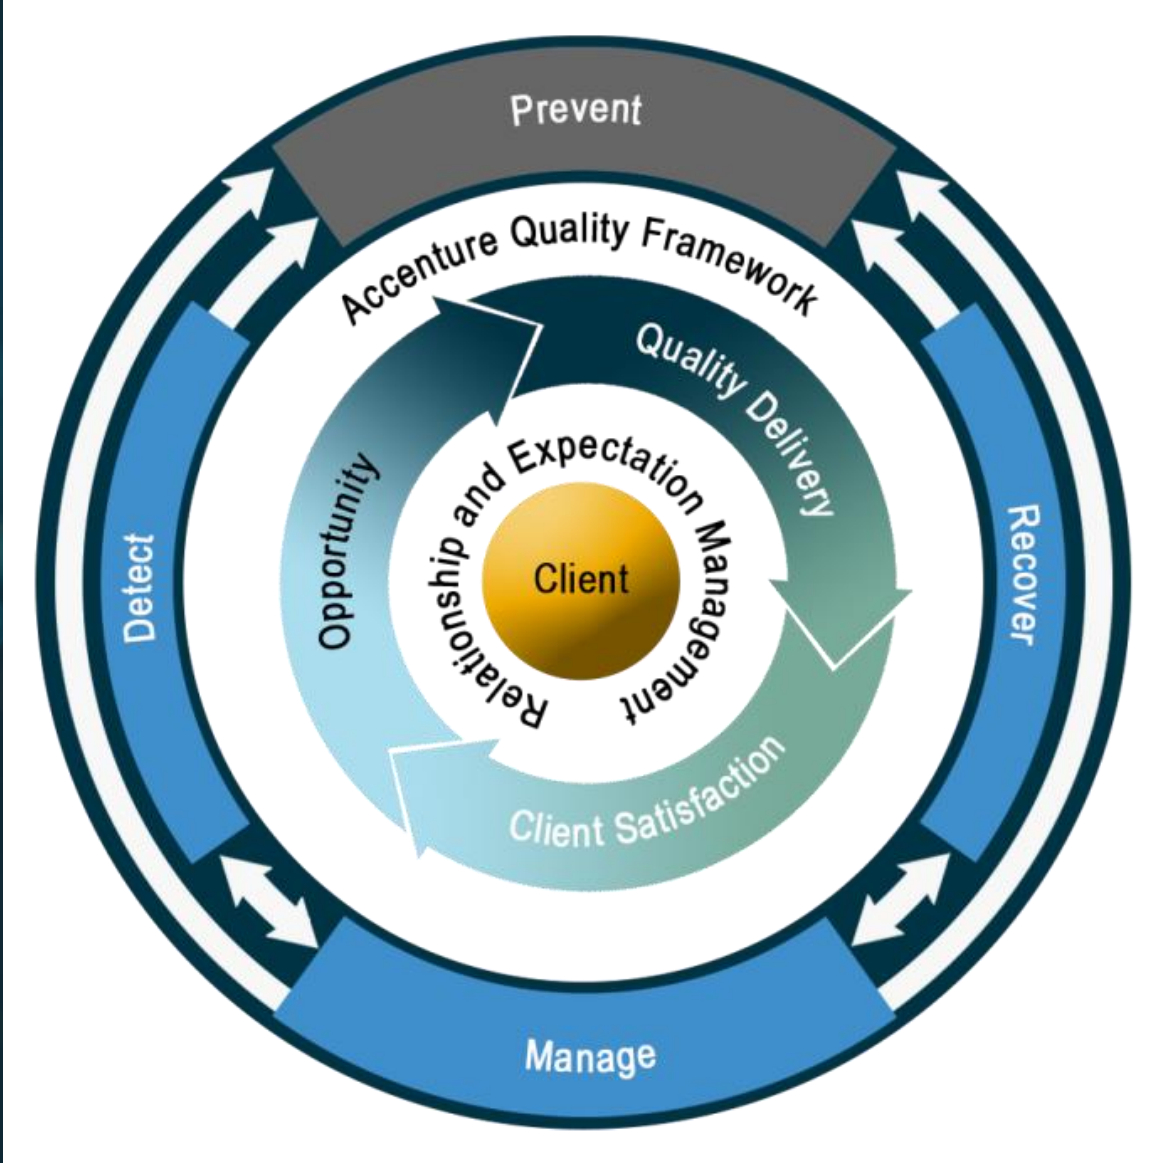

Any iterative development changes that can be absorbed would be done

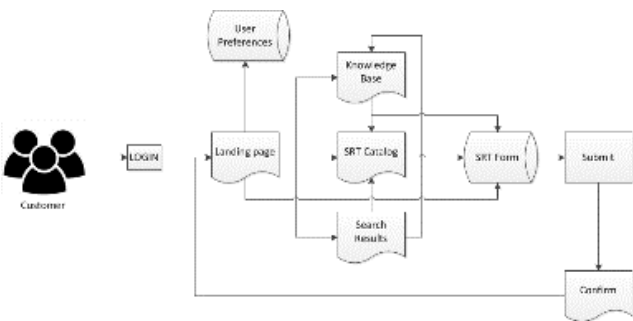

Review fully configured application

Any iterative development changes that can be absorbed would be done

Commercial Best Practices

Digital Life (technology)

Knowledge Economy (education)

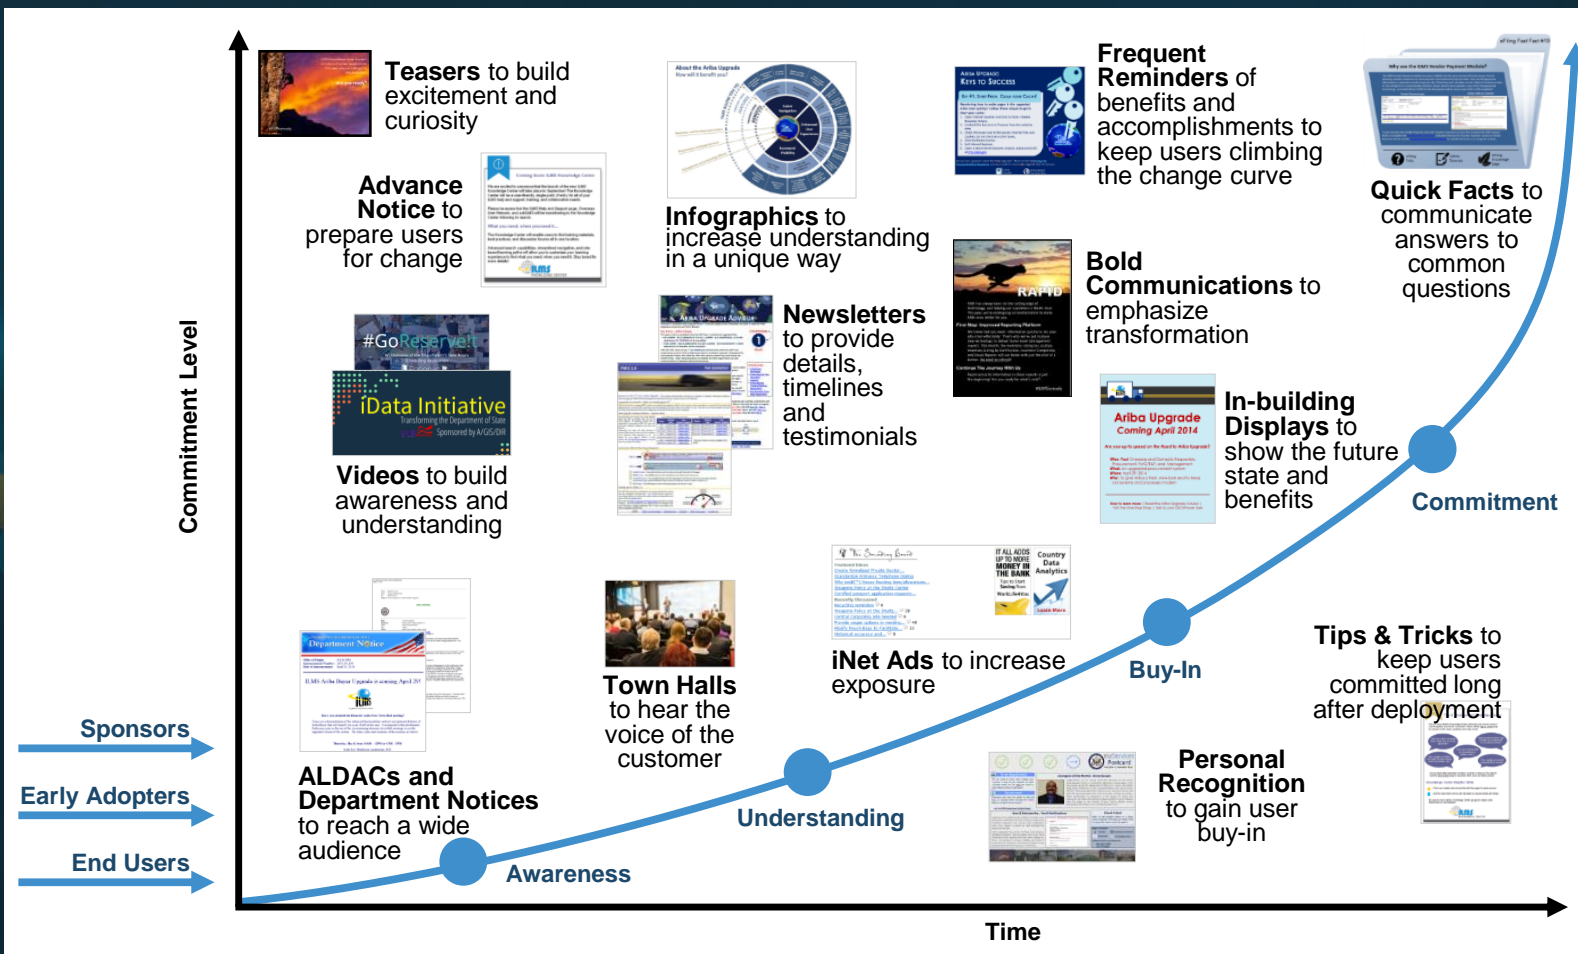

Quality of Life

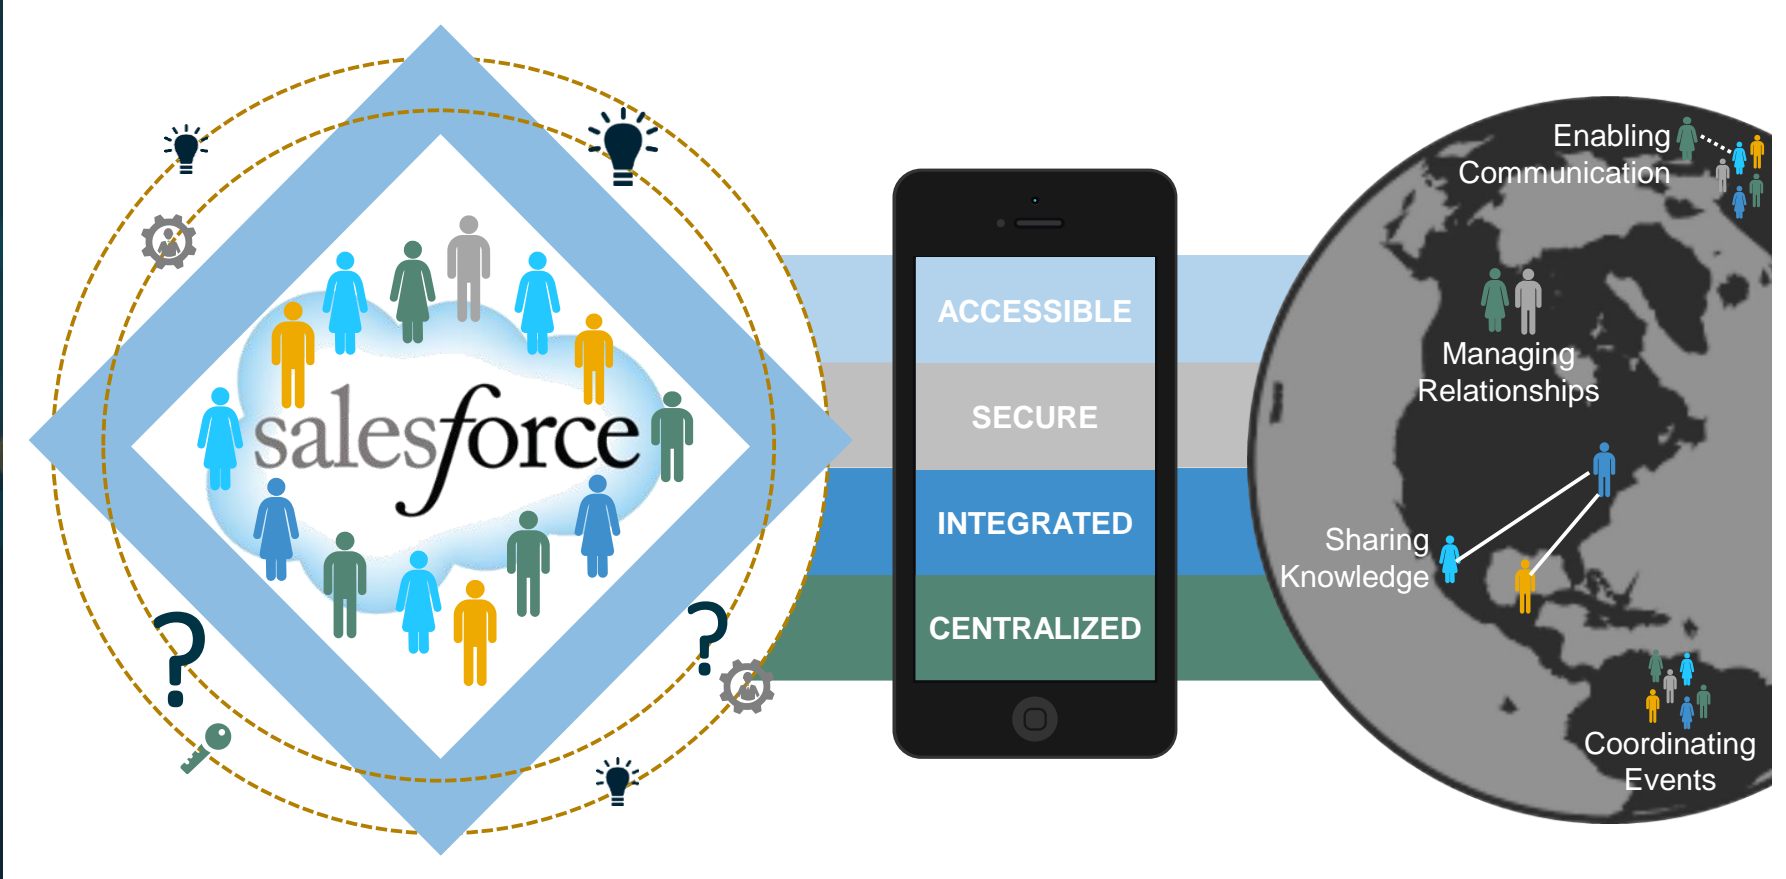

Country: Afghanistan Organizational Model: Pyramid	Overall Acceptance: High Acceptance
Digital Life: Low	Power Distance: Large
Highlights <ul style="list-style-type: none"> • Technical proficiency is low; evaluate before developing training strategy • Users may need more time getting used to mechanics of using a new system 	Highlights <ul style="list-style-type: none"> • Strong support from top leadership is essential • Communications must be top down • Management must be involved and supportive from day one • Stakeholders are top management
Strategies <ul style="list-style-type: none"> • Expect initial learning curve with ILMS • Remote training may not be successful; Users need to have face to face interaction with instructors • Focus on "Quick Tours" / 1 Pagers and have users follow them in class • Print and hand out crosswalks of old terms to new ILMS terms • Expect class to take longer than usual • Expect class to follow you step by step and prepare to walk through examples slowly 	Strategies <ul style="list-style-type: none"> • ID Key players (both American and LES management/leads) and send them copies of the ILMS Toolkit; must have up front buy in • Prepare easily delegated messaging and action items in the form of templates that can be used by upper management for pre-go live, go live, how to request accounts, how to get help, etc. • Prepare structured learning environment with formal tone for participants • Set aside dedicated 1:1 time with Lead Procurement and Lead Account during Day 1 to answer questions and gain buy-in
Knowledge Economy: Low	Individualism: Collectivism
Highlights <ul style="list-style-type: none"> • Formal education not highly valued • Users benefit from working on samples • Users will need to touch and feel new system 	Highlights <ul style="list-style-type: none"> • Show benefits to all roles and all levels • Emphasis on building skills and becoming masters of something • Avoid rumors with frequent communications from top management
Strategies <ul style="list-style-type: none"> • Focus on Quick Tours/ 1 Pagers for users to use in class and take home • Highlight exercise guide scenarios before each lesson • Encourage users to follow materials step by step • Work to engage users as they will be hesitant to ask questions • Prepare ILMS certificates for training completion and let users know they are coming 	Strategies <ul style="list-style-type: none"> • Walk through benefits of ILMS to all user groups when presenting ILMS benefits in the intro power points • Gain group buy in through benefits to the whole; stress integration and impacts on others at post; show why its important for everyone to take an active role in the procurement process
Quality of Life: Low	Uncertainty Avoidance: Strong
Highlights <ul style="list-style-type: none"> • Fewer job choices and opportunities leave people open to new ideas and new ways of working • Great pride is taken in work and people take their roles seriously 	Highlights <ul style="list-style-type: none"> • Need to prove a strong track record of success • Need formal rules to minimize conflicts • Employees need reassurance and to understand motivations of change • Managers need to be seen as "experts" on system
Strategies <ul style="list-style-type: none"> • Engagement will be high if training is seen as valuable • Focus on building ILMS skills as a motivator 	Strategies <ul style="list-style-type: none"> • Give post as many documents on the Site SP as possible (Job Aids, Reference Guides, Class Agendas, Class Curriculum) • Direct users to ILMS Website early and often to read about ILMS • Highlights numbers/success of ILMS at other posts; focus on peer posts • Prepare to speak to examples of post using ILMS and how they worked through the change

We want to help our clients put their customers first by creating new digital experiences and processes that replace and improve legacy operations

Driven by Digital

- Opening up possibilities through **human-centered design**
- **Changing mindsets** about what is possible
- Bringing **industry innovations**
- Changing **operating models** to match new possibilities and expectations
- Introducing new tools that unlock the ability to do **more with less**
- Protecting our **client's people and data**

Foot in Today

FOCUS & ENERGY

Aligning our time and resources with the market opportunity

- Living Account Plans (Plan, Evaluate, Adapt)
- Strong leverage of Strategic Solutions
- Increased connection to LLP Industry groups
- Expanded use of Digital Studio
- Strong operational blocking and tackling (more anticipation/planning, less reaction)

Foot in Tomorrow

CULTURE & PRACTICE OF INNOVATION

Moving at pace to bring new ideas to the market, ahead of our competitors

- Proactive, futurist mindset
- Process built for innovation capture and creative deal structures
- Deeper connection to Accenture Technology labs and Fjord Trends
- Centralized Growth team
- Alignment of performance achievement with our goals

Integration Architecture

Quality Management Approach

Leadership and Governance
Interaction with Internal and External Units

1.0 Application Support Request Resolution

- 1.1 Receive and Classify Requests
- 1.2 Process Requests
- 1.3 Receive Approval and Close Request
- 1.4 Maintain Support Chain Environments

Operating Enablers

- Policies
- Operating Metrics
- Knowledge Transfer & Training

2.0 System Monitoring

- 2.1 Interface Monitoring
- 2.2 Technical Architecture Monitoring
- 2.3 Collect and Evaluate Metrics and Report Status

Infrastructure & Tools

- User Manuals and Job Aids
- Software Tools
- EOC and Call Center

Our blended learning solution supporting HR Source users across 56 locations

Instructor-Led Training

Role-based classroom training co-delivered by Accenture instructors, HR Source PMO, & HRD SMEs to **provide hands-on system experience**

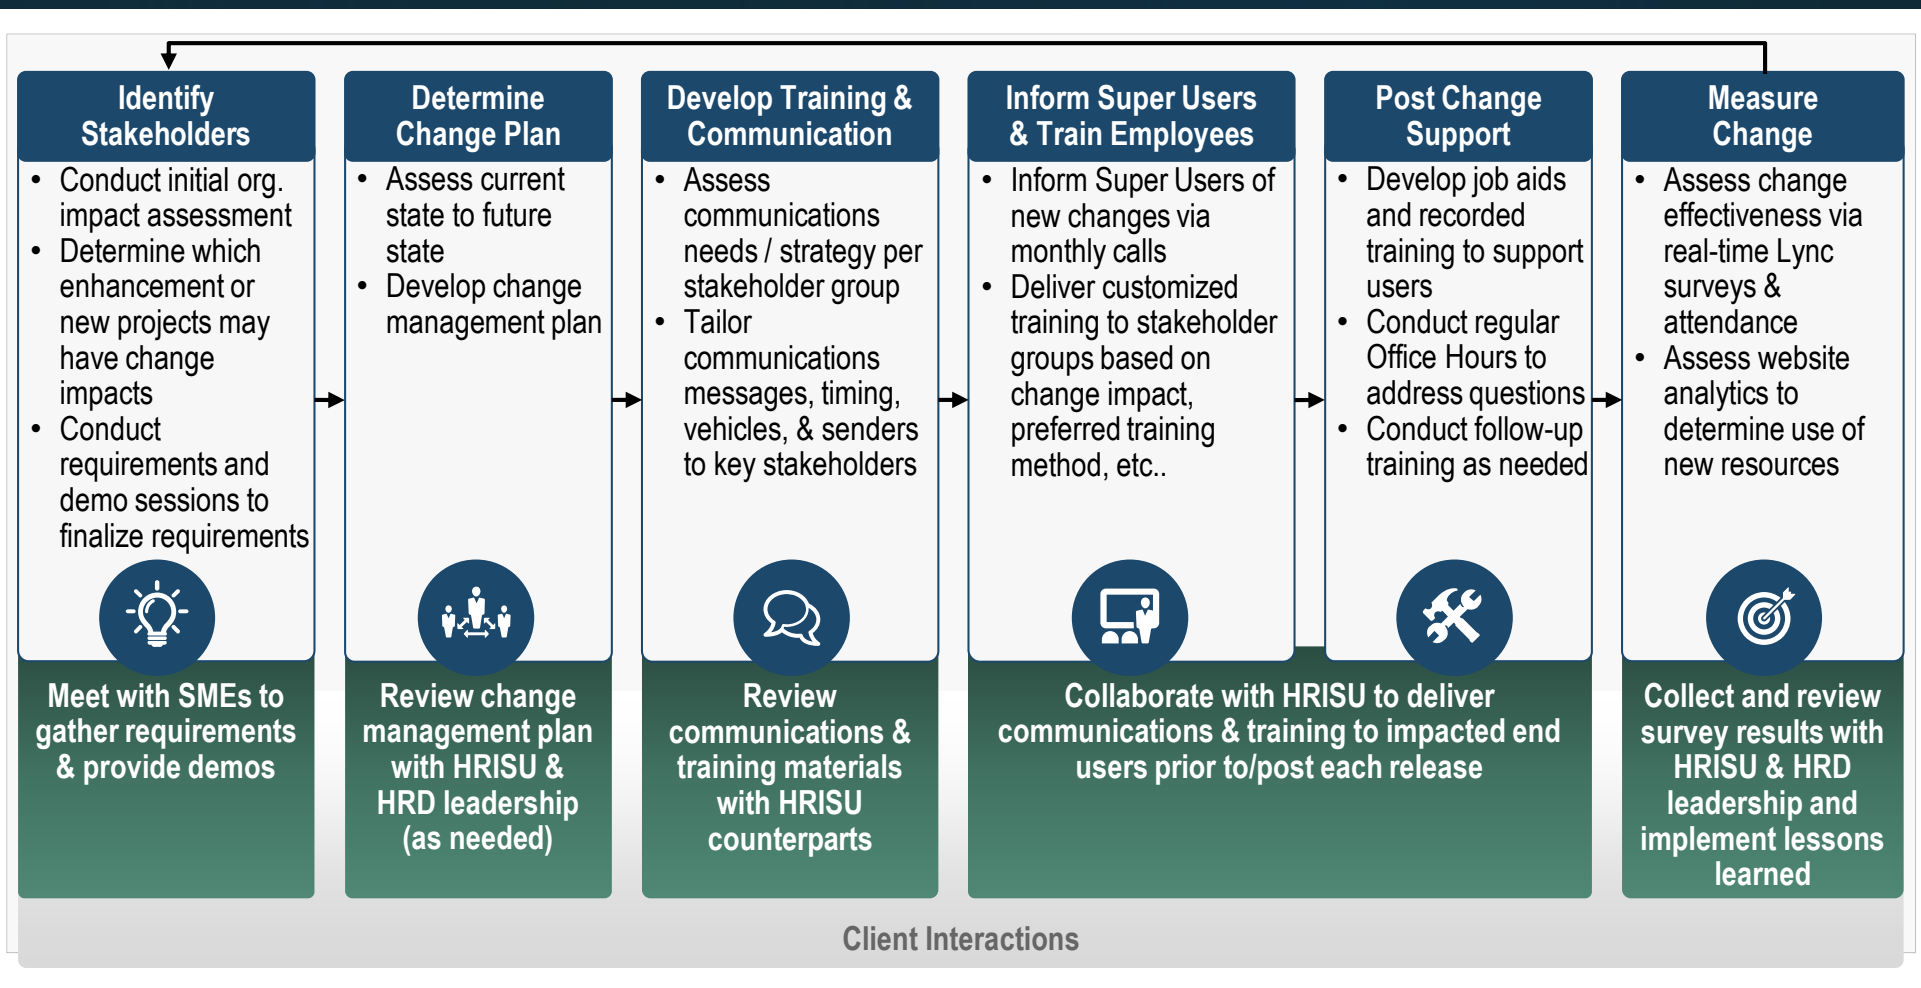

HR Source BUNET
HR Source's **online support** to system guides, job aids, videos, FAQs

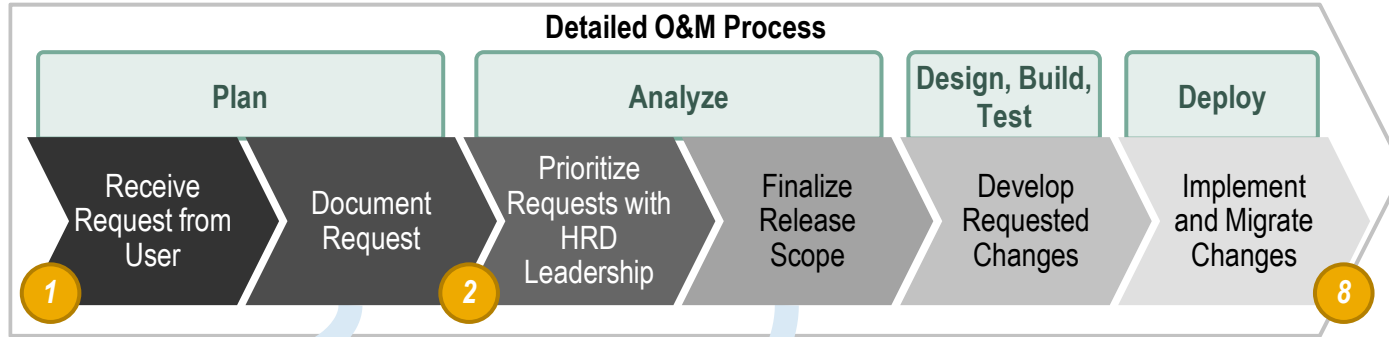

Office Hours
Provide **re-occurring venue** to for Q&A

Videos
Recorded videos of lync training sessions to provide **real-time training** at the user's convenience

Job Aids & System Guides
Maintain and develop **step-by-step instruction** on business process activities to include best practices

Super User Support
Super Users at Field Offices and HQ are **change advocates** and provide on-going user support

Rapid Delivery of High Value User Requests

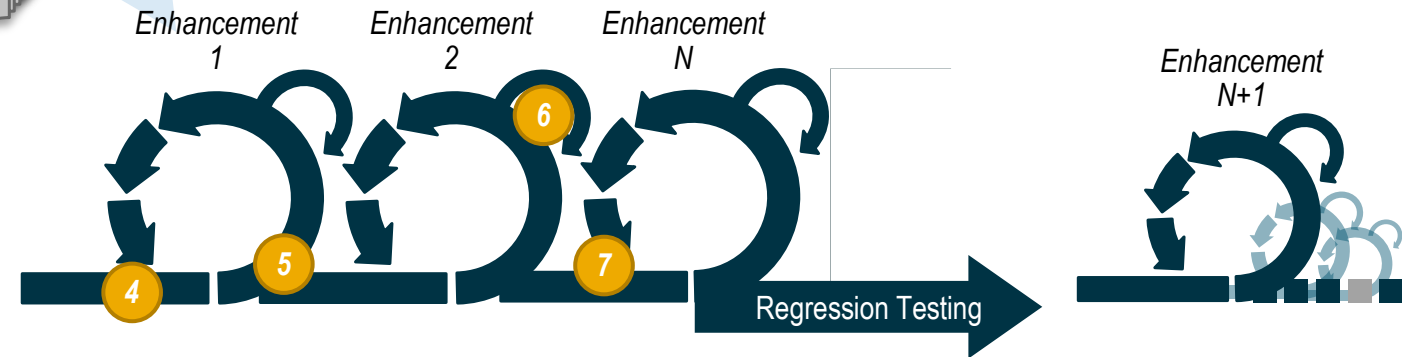

1. Identify defect or enhancement and document in the backlog
2. Prioritize requests via Change Advisory Board (CAB) and HRD Leadership
3. Schedule changes for release
4. Meet with users to gather requirements
5. Resolve the issue and update code, job aids and training materials
6. Demonstrate prototype to users and collect feedback
7. User acceptance testing of enhancements
8. Deploy code to the Production Environment

HR Source Position Management

Position Set-up

Every **Position** is assigned a unique number. People & FSL are assigned to **Positions**.

Core HR

Job Code
1811
GS 13:
Special Agent

Position numbers tied to Job Codes. Multiple Job Codes aligned to a *Job Profile*.
(employee & job skills/competencies)

JPM

RTF Upcoming Vacancy
Position #

Position included on RTF for upcoming vacancy; gives insight on position details.

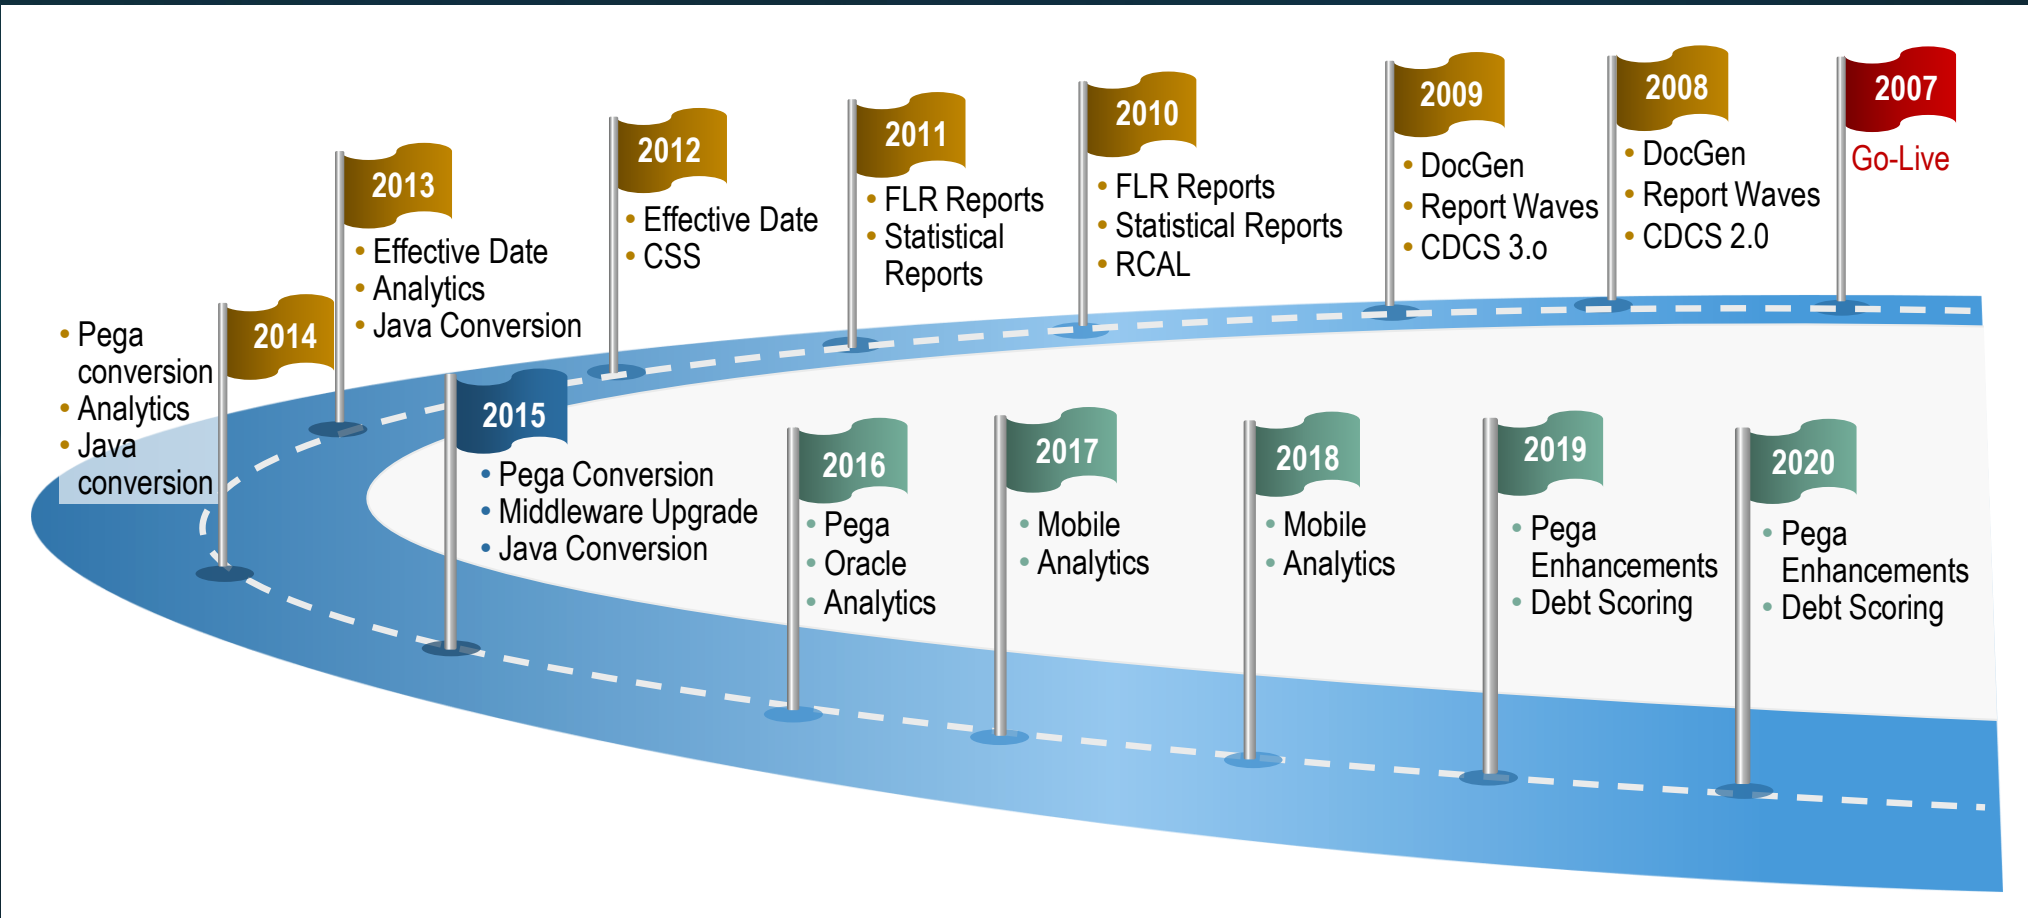

FBI JOBS Apply to Position
Position #

Position carried to Job Vacancy from the RTF. Associated *Job Profile* used to build vacancy details.

Talent Acquisition

Position #

Selected Candidate enters FBI associated with that unique **Position** number.

Collaboration

Meet with HRD Leadership weekly to review priorities, upcoming releases & plans, and any risks/concerns

Conduct monthly CAB to validate upcoming enhancements with core users

Meet with SMEs at the start of each release to gather & validate detailed rqmts. & provide demonstrations prior to release

Engage with impacted end users & Super Users to provide training & communications

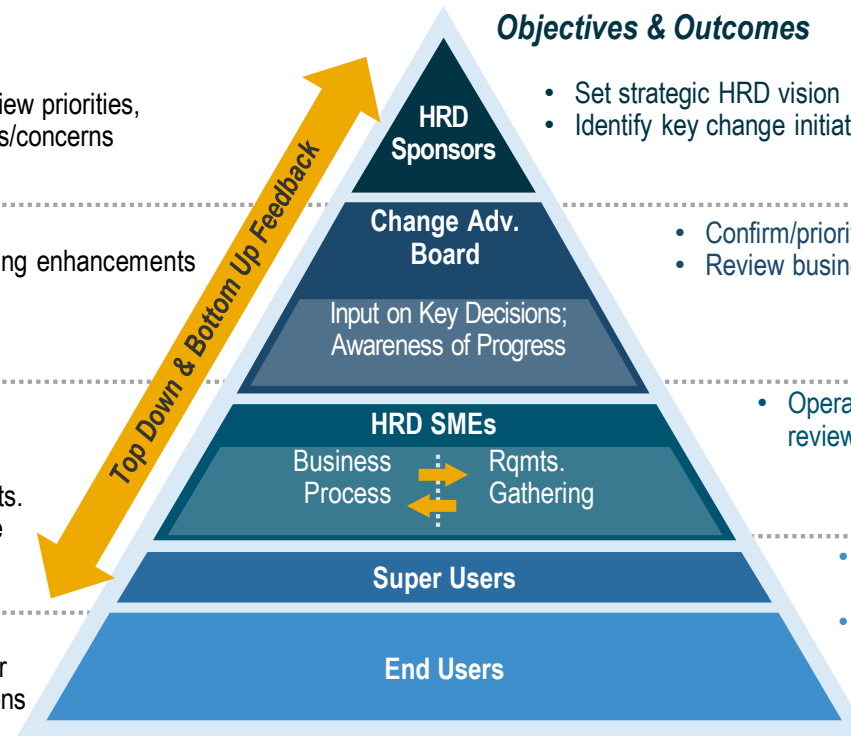

Objectives & Outcomes

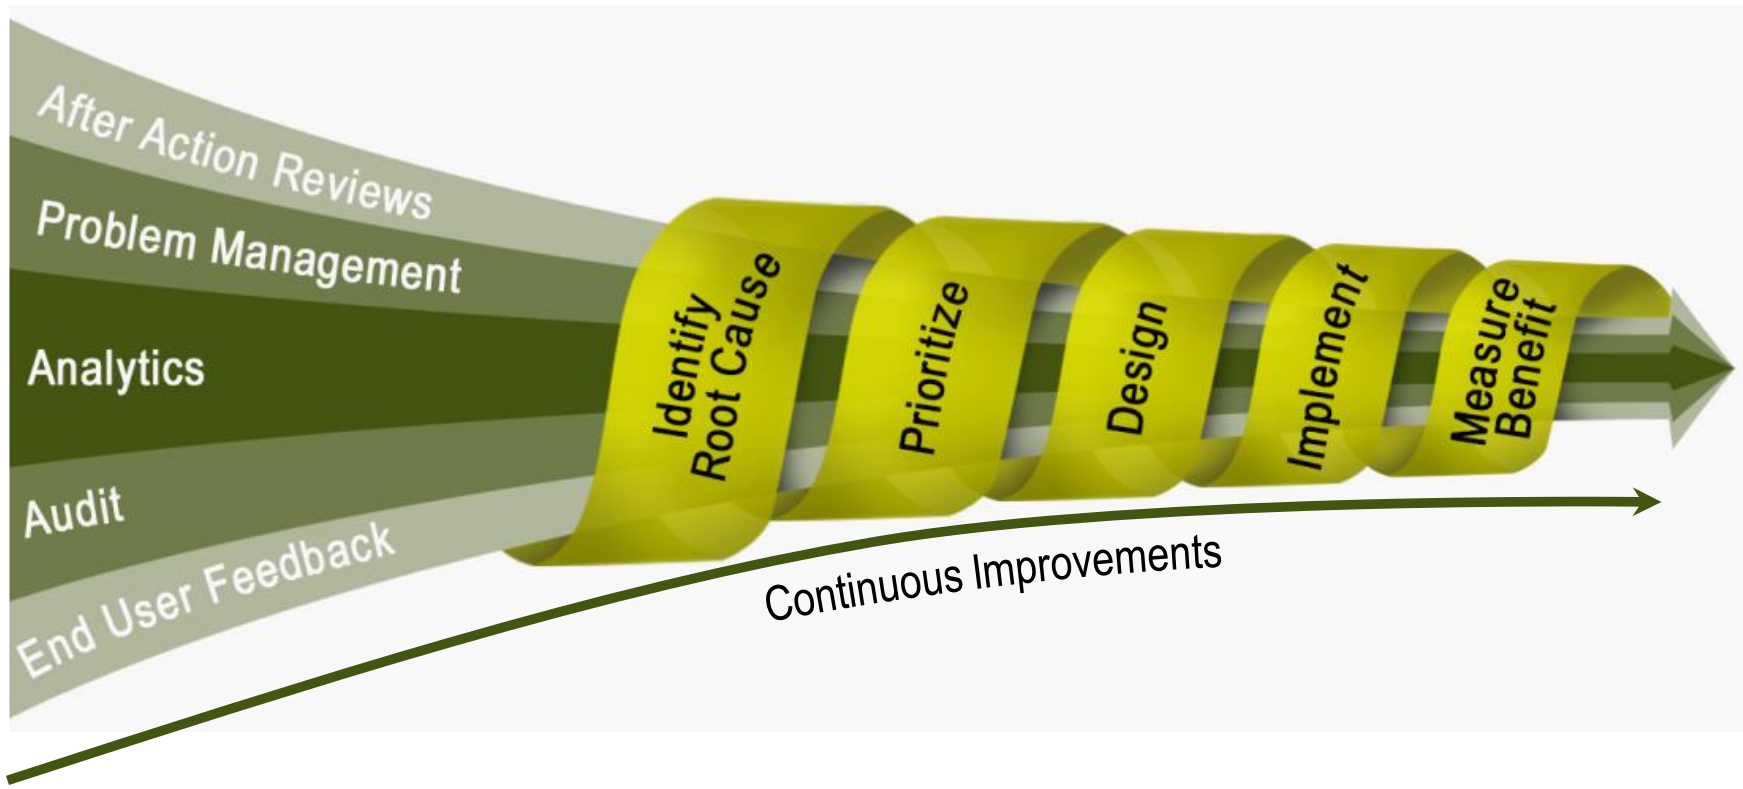

- Set strategic HRD vision
- Identify key change initiatives & relevant decision markers

- Confirm/prioritize enhancements
- Review business cases and track progress of new development

- Operationalize decisions via requirements and business process reviews with key stakeholders

- Empower Super Users with knowledge of upcoming changes
- Communicate/train users on changes; collect feedback via appropriate channels

- Confirm Interface Mod List
- Validate System POCs
- Identify DoDAF artifacts requiring update
- Identify NR KPPs
- Develop Test Plans
- Revise ICDs
- Update DoDAF artifacts
- Finalize Interface Modifications (as needed)
- Finalize Updated MOAs
- Update DoDAF artifacts
- Maintain ISP
- Complete Interoperability Assessment (as needed)
- Update
- Complete IOP Evaluation
- Maintain DoDAF artifacts
- Maintain ISP

- Phase 1** Plan/Analyze Design Build
- Confirm New Interface List
 - Establish System POCs for new interfaces
 - Identify DoDAF artifacts requiring update
 - Confirm NR KPPs
 - Develop Test Plans
 - Establish & update ICDs
 - Update DoDAF artifacts
 - Update ISP
 - Build new interfaces
 - Finalize MOAs
 - Update DoDAF artifacts
 - Maintain ISP
